FOREWORD

The Ministry of Education, acting through the National Council for Curriculum and Assessment (NaCCA) has, in recent times, been working on curriculum and assessment reforms to improve the quality and relevance of learning experiences in pre-tertiary schools in Ghana. This curriculum, known as the Common Core Programme (CCP), is a sequel to the Kindergarten-Primary standards-based school curriculum, the implementation of which commenced with the 2019/2020 academic year. The CCP is carefully designed for learners in JHS 1 to JHS 3 (Basic 7 to Basic 9) as part of a holistic learning experience that prepares them for post-secondary education, the world of work or both. The curriculum focuses on building character and nurturing values, in addition to ensuring a seamless progression for all learners in JHS and to create clear pathways for academic and career-related programmes.

In the twenty-first century, memorisation of facts and figures is no longer a sufficient learner attribute. Therefore, the CCP focuses on the acquisition of the 4Rs (Reading, wRiting, aRithmetic and cReativity) and core competencies to afford learners the ability to apply knowledge innovatively to solve everyday problems. Personal projects, community projects and community service have been integrated into the CCP as part of a comprehensive assessment programme, including assessment of knowledge, skills, attitudes and values that mainly emphasise what learners can do. It is hoped that the content of this curriculum will promote better high school education that meets the varied learning needs of the young people in the country and addresses the shortfalls in the current school curriculum in relation to learning and assessment.

The Ministry of Education is committed to ensuring that our schools develop globally competitive high school graduates who have the requisite employable skills and workplace ethos. The CCP curriculum will, therefore, play an important role in this regard. The Ministry will support the effective implementation of the CCP to include capacity development of all teachers to ensure improved learning experiences and outcomes for our young people.

Dr Matthew Opoku Prempeh (MP)

The Honourable Minister of Education

NOT FOR SALE
BUT FOR TRAINING PURPOSES

ACKNOWLEDGEMENTS

This Common Core Programme (CCP) curriculum was developed together with the National Pre-tertiary Learning Assessment Framework (NPLAF) and Teacher’s and Learner’s Resource Packs. All these documents were developed by the National Council for Curriculum and Assessment (NaCCA), under the oversight and strategic direction of the Ministry of Education (MoE) with support from some agencies of the MoE and other relevant stakeholders.

NaCCA, acting on behalf of the Ministry of Education (MoE), would like to express its sincere gratitude to all its partners who participated in the professional conversations and discussions during the course of the development of the CCP curriculum.

NaCCA also extends special commendations to the leadership of the Ghana Education Service (GES), National School Inspectorate Authority (NaSIA), National Teaching Council (NTC), Commission for Technical and Vocational Education and Training (Commission for TVET) and other agencies of the MoE.

Additionally, NaCCA acknowledges the contributions of staff from various Universities and Colleges of Education as well as teachers and learners within the Ghana Education Service.

Special thanks go to those who also contributed to shaping this curriculum content through the consultation process, including the national stakeholder engagement conducted in Accra in February, 2020.

**NOT FOR SALE
BUT FOR TRAINING PURPOSES**

INTRODUCTION

In the junior high school education, learners are expected to take a Common Core Programme (CCP) that emphasises a set of high, internationally-benchmarked career and tertiary education-readiness standards. Learners need to acquire these for post-secondary education, the workplace or both. The standards articulate what learners are expected to know, understand and be able to do by focusing on their social, emotional, cognitive and physical development. The (CCP) runs from JHS 1 (Basic 7) through to JHS 3 (Basic 9).

The common core attributes of the learner, which describe the essential outcomes in the three domains of learning (i.e. cognitive, psychomotor and affective), are at the centre of the CCP (see Figure 1). Inspired by the values which are important to the Ghanaian society, the CCP provides an education of the heart, mind and hands in relation to the learner's lifetime values, well-being, physical development, metacognition and problem-solving abilities. Ultimately, this will produce character-minded learners who can play active roles in dealing with the increasing challenges facing Ghana and the global society.

The features that shape the Common Core Programme are shown in Figure 1. These are:

- **learning and teaching approaches**—the core competencies, 4Rs and pedagogical approaches
- **learning context**—engagement service and project
- **learning areas**—mathematics, science, computing, languages (English, Ghanaian Language, French and Arabic), career technology, social studies, physical and health education, creative arts and design and religious and moral education.

NATIONAL COUNCIL FOR
CURRICULUM & ASSESSMENT

NOT FOR SALE
BUT FOR TRAINING PURPOSES

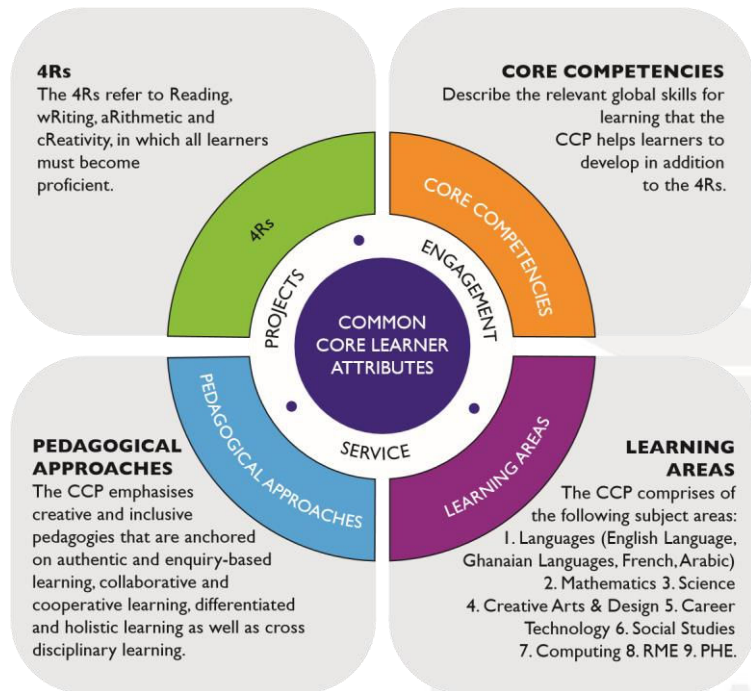

Figure 1: CCP Learner Attributes These are elaborated subsequently:

Learning and Teaching Approaches

- **The core competencies:** Describe the relevant global skills for learning that the CCP helps learners to develop in addition to the 4Rs. The global skills for learning allow learners to become critical thinkers, problem-solvers, creators, innovators, good communicators, collaborators, digitally literate, and culturally and globally sensitive citizens who are life-long learners with a keen interest in their personal development.
- **Pedagogical approaches:** The CCP emphasises creative and inclusive pedagogies that are anchored on authentic and enquiry-based learning, collaborative and cooperative learning, differentiated learning, and holistic learning as well as cross disciplinary learning.
- **The 4Rs across the Curriculum:** The 4Rs refer to Reading, wRiting, aRithmetic and cReativity, which all learners must become fluent in.

Learning Context

The CCP places emphasis on engagement of learners in the classroom activities and projects (in and outside classroom). These projects can involve individual or group tasks which all learners are required to complete by the end of JHS 3 (Basic 9). The CCP project provides learners with contexts to demonstrate creativity and inventiveness in various areas of human endeavour. Community service offers opportunity for learners to nurture, love and care for, and solve problems in their community.

Learning Areas

The CCP comprises the following learning areas:

1. Languages (English Language, Ghanaian Languages, French, Arabic)
2. Mathematics
3. Science
4. Creative Arts and Design (CAD)
5. Career Technology
6. Social Studies
7. Computing
8. Religious and Moral Education (RME)
9. Physical and Health Education (PHE)

This document sets out the standards for learning Career Technology in the Common Core Programme (CCP). The standards in the document are posited in the expectation that the CCP, B7/JHS1 – B9/JHS3 will offer quality education for all types of learners. The design of this curriculum is based on the features of the CCP as shown in Figure 1. It emphasises a set of high internationally-benchmarked career and tertiary education readiness standards. Learners need to acquire these competencies in Career Technology for post-secondary education, workplace training or both. The curriculum has been designed to be user friendly because it provides a detailed preamble that covers the rationale, philosophy, aims, profile of expected learning behaviours (i.e., knowledge, skills, attitudes and values), pedagogical approaches, core competencies and the 4Rs, assessment practices and instructional expectations.

RATIONALE

Universally, the development of a country hinges on industrial technology among others. Thus, Career Technology becomes the prospective backbone of the socio-economic and political development of every nation. Career Technology offers training for job opportunities as an integral part of everyday life. The course creates opportunities for creativity, innovation and skills development. It consists of a body of knowledge which attempts to explain, interpret concepts, ideas, and experiences which offer avenues for the creation of goods and services. With the introduction of Career Technology, Ghana as a country can significantly use the numerous professions to provide the needed employable jobs to boost the development of the country. The programme is intended to provide the required knowledge, skills and attitude to ensure competent training for learners from JHS 1 to JHS 3 (Basic 7 to Basic 9) levels of education in Ghana.

The expectation of Career Technology seeks to achieve the goals of the Education Strategic Plan (ESP 2018–2030). The Education Strategic Plan (ESP) 2018–2030 lays out Ghana’s vision and goals for the Education Sector up to 2030, as well as detailed strategies for how these goals will be achieved. As part of the policy objectives, the teaching of Career Technology from JHS 1 to JHS 3 (Basic 7 to Basic 9) as a Common Core Programme has become a very meaningful aspect of the vision of education in Ghana. In response to the Education Strategic Plan 2018–2030, the Career Technology Course is thus expected to:

- Improve the nation’s economy by bridging the connection between schooling, employment, productivity and trade.
- Enhance learners’ outcomes in employment-related skills and competencies.

Career Technology employs pedagogical approaches or strategies of social constructivism, differentiation, scaffolding, inclusion, among others which are to cater for differences in ability and aspirations of learners. The main strengths of Career Technology as a Common Core Programme are:

- It provides learners with basic knowledge, skills and values to enable them function in society
- It creates opportunity for the development of special aptitudes and talents through elective courses
- Learners are able to solve real life problems since content is built around problems in the society
- Learners’ understanding of concepts is reinforced since there is integration of subjects.

NOT FOR SALE
BUT FOR TRAINING PURPOSES

PHILOSOPHY

Teaching Philosophy

Ghana as a developing country, believes that an effective Career Technology education should be inquiry-based to ensure sustainable development. Career Technology education must therefore, provide learners with opportunities to expand, change, enhance and modify the ways in which they view the scientific, technological, industrial, and economic world. It is pivoted on learner-centred technology, teaching and learning approaches that engage learners physically and cognitively to develop knowledge, skills and attitudes. This involves the acquisition of critical thinking, collaboration and communication, creativity and innovation, problem solving in an activity-driven environment.

Learning Philosophy

Career Technology as a subject, recognises the unique endowment of every learner. It promotes the development of individual talents based on creativity, innovation, critical thinking, and graphical expression of ideas of the learner's capacity as an individual. It offers learners the opportunity to work at their own pace without discrimination or comparison. Activities in Career Technology provide the learner with various options that promote brainstorming, decision making and expressive learning, self-assessment and evaluation. This approach of learner-centredness helps learners to appreciate every aspect of the subject.

Based on the interactive, exciting and stimulating nature of Career Technology, it enables learners to discover their talents and develop their lifelong, core competencies, functional and foundational skills. The learning environment (classroom, workshops, sites and laboratories) in Career Technology should encourage learners to participate and collaborate inclusively, understand and respect their skills, abilities and experiences as well as those of others. This sets a sustainable pace in achieving expected learning outcomes in the **4Rs**— **R**eading, **wR**iting, **aR**ithmetic and **cR**eativity.

NOT FOR SALE
BUT FOR TRAINING PURPOSES

AIMS

General Aim

The Career Technology Curriculum is aimed at developing individuals to become creative, innovative, technologically minded, digital literates and problem solvers. They should have the ability to think critically and have both the confidence and competence to participate fully in Ghanaian society as responsible local and global citizens.

Specific Aims

Furthermore, the subject aims to;

- Educate the learner in Career Technology through the Head, Heart and Hands (3-H) Therapy.
- Develop the learner's thinking capacity, reasoning power and an understanding of the environment.
- Provide learners with the opportunity to respond and act creatively according to intuition.
- Instil in the learner a lifelong independent and critical mind for analytical and problem-solving skills like critical analysis, creativity and innovation.
- Instil in learners the ability to challenge stereotypes about gender disability, religion, ethnicity, economic status etc. that limits in some career pathways.
- Develop the personality in terms of emotional balance, material, spiritual, cultural and intellectual life of an individual.
- Strengthen the learner's power of imagination, creative thinking, self-expression, critical analysis, synthesis and evaluation.
- Predispose the learner to the technical and vocational identities of Career Technology and entrepreneurial skills needed for industrialisation.
- Develop in the learner the sense of appreciation and appraisal of Career Technology skills of the specific areas for future development.

NOT FOR SALE
BUT FOR TRAINING PURPOSES

OBJECTIVES OF THE CAREER TECHNOLOGY CURRICULUM

In this regard, the Career Technology Curriculum is designed to help learners to:

- Develop the spirit of curiosity, creativity, innovation and critical thinking for investigating and understanding their technological environment.
- Develop skills, habits of mind and attitudes necessary for scientific and technological inquiry.
- Communicate graphical, technological, engineering, industrial, scientific ideas effectively.
- Use technological, engineering, industrial, scientific, entrepreneurial, employment concepts in explaining their own lives and the world around them.
- Develop humane and responsible attitudes towards the use of resources in Ghana and elsewhere.
- Show concern and understanding of the interdependence of all living things, and manufactured products and the Earth on which they live.
- Design activities for exploring and applying scientific, technological, engineering, industrial, entrepreneurial, employment ideas and concepts.
- Develop skills for using science, technology, and entrepreneurship to enhance learning and living.
- Use resources and materials in their environments in a sustainable manner.
- Develop the ability to identify and address gender and inclusion issues related to career opportunities and choices.

NATIONAL COUNCIL FOR
CURRICULUM & ASSESSMENT

NOT FOR SALE
BUT FOR TRAINING PURPOSES

LEARNING DOMAINS (EXPECTED LEARNING BEHAVIOURS)

A central aspect of this curriculum is the concept of three integral learning domains that should be the basis for instruction and assessment. These are:

- Cognitive (Knowledge, Understanding and Application)
- Psychomotor (Practical Skills)
- Affective (Attitudes and Values).

Knowledge, Understanding and Application

Under this domain, learners acquire knowledge through learning experiences. They may also show understanding of concepts by comparing, summarising, re-writing, etc. in their own words and constructing meaning from instruction. The learner may also apply the knowledge acquired in some new contexts. At a higher level of learning behaviour, the learner may be required to analyse an issue or a problem. At a much higher level, the learner may be required to synthesise knowledge by integrating a number of ideas to formulate a plan, solve a problem, compose a story, or a piece of music. Furthermore, the learners may be required to evaluate, estimate and interpret a concept. At the highest level, learners may be required to create, invent, compose, design and construct. These learning behaviours: “knowing”, “understanding”, “applying”, “analysing”, “synthesising”, “evaluating” and “creating” fall under the domain of “Knowledge, Understanding and Application”.

In this curriculum, learning indicators are stated with action verbs to show what the learner should know and be able to do. For example, the learner will be able to describe something. Being able to “describe” something after teaching and learning has been completed means that the learner has acquired “knowledge”. Being able to explain, summarise, and give examples, etc. means that the learner has understood the concept taught.

Similarly, being able to “develop”, “defend”, etc. means that the learner can “apply” the knowledge acquired in some new context. Each of the indicators in the curriculum contains an “action verb” that describes the behaviour the learner will be able to demonstrate after teaching and learning has taken place. “Knowledge, Understanding and Application” is a domain that should be the prime focus of teaching and learning in schools. Teaching in most cases tend to stress knowledge acquisition to the detriment of other higher-level behaviours such as applying knowledge.

Each action verb in any indicator outlines the underlying expected outcome. Each indicator must be read carefully to know the learning domain towards which to teach. The focus is to move teaching and learning from the level of mere acquisition of “knowledge” that involves memorisation of facts, reliance on formulas, remembering of facts learned without reviewing or relating them to the real world known as **surface learning** to a new position called **deep learning**. Learners are expected to deepen their learning by applying their knowledge to develop critical thinking skills, to explain issues, and reasons to generate creative ideas to solve real life problems they would face in school and in their later adult lives. This is the position where learning becomes beneficial to the learner.

The explanations and the key words involved in the Profile Dimensions - “Knowledge, Understanding and Application” domain are as follows:

- Knowing:** The ability to remember, recall, identify, define, describe, list, name, match, state principles, facts and concepts. Knowledge is the ability to remember or recall concepts already learnt and this constitutes the lowest level of learning.
- Understanding:** The ability to explain, summarise, translate, rewrite, paraphrase, give examples, generalise, estimate or predict consequences based upon a trend. Understanding is generally the ability to grasp the meaning of some material that may be verbal, pictorial or symbolic.
- Applying:** This dimension is also referred to as “Use of Knowledge”, and is the ability to use knowledge or apply knowledge, apply rules, methods, principles, theories, etc. to situations that are new and unfamiliar. It also involves the ability to produce, solve, plan, demonstrate, discover, etc.
- Analysing:** The ability to break down material/information into its component parts; to differentiate, compare, distinguish, outline, separate, identify significant points etc., ability to recognise unstated assumptions and logical fallacies; ability to recognise inferences from facts, etc.
- Synthesising:** The ability to put parts or ideas together to form a new whole. It involves the ability to combine, compile, compose, devise, plan, revise, organise, create, generate new ideas, and solutions.
- Evaluating:** The ability to appraise, compare features of different things and make comments or judgement, contrast, criticise, justify, support, discuss, conclude, make recommendations, etc. Evaluation refers to the ability to judge the worth or value of some material based on some guide.
- Creating:** The ability to use information or materials to plan, compose, produce, manufacture or construct other products.

From the foregoing, creating is seen as the highest form of thinking and learning and is therefore the most important behaviour. This, unfortunately, is the area where most learners perform poorly. In order to get learners to acquire critical thinking skills right from the lower primary level, it is advised that teachers do their best to help the learners develop reasoning skills.

To be effective, competent and reflective citizens who will be willing and capable of solving personal and societal problems, learners should be exposed to situations that challenge them to raise questions and attempt to solve problems.

Suggested Activities:

Teachers are to:

- select teaching and learning activities that will ensure maximum learner participation
- avoid rote learning and drill-oriented approaches and rather emphasise participatory teaching and learning with special focus on the cognitive, and psychomotor domains wherever appropriate.
- re-order the suggested teaching and learning activities and also add to them where necessary in order to achieve the best learning situation.
- help learners apply their knowledge in dealing with issues both in and out of school.
- help learners to be problem solvers.

In Career Technology, learners are expected to acquire valuable basic practical skills to serve as a foundation for further skills development. Observe and also ensure that learners exhibit skills and values in their behaviour and in career activities.

Evaluation:

Suggested mode of evaluating learners' performance in Career Technology lessons/activities are as follows:

1. **Concept/Ideas:** Originality, Creativity, Idea Development, Visualising, Pre-imaging, Sketching, etc.
2. **Planning/Preparation:** Acquisition of Tools, Props Materials, Costumes, Equipment and Instruments
3. **Process (Making/Production):** Selection and use of tools/instruments, materials etc. according to design specifications. Demonstration of core values and competence; observation of rules and guidelines
4. **Product/Artefact:** Finishing, Suitability, Usefulness, Aesthetic and Cultural Values
5. **Presentation/Exhibition:** Analysis, Appreciation, Appraisal, Critique, Judgement.

Teachers should:

- Design sets of tasks and assignments that will challenge learners to apply their knowledge to issues and problems
- Engage learners in creating new and original items/compositions
- Assist learners to develop positive attitudes for activities
- Emphasise the issues of conceptualisation, planning and making as key components in evaluating learners' work
- Guide learners to transform what they know, understand and can do into creating products

- Observe and guide learners as they work independently or in groups in the performance of various tasks since both process and products are equally important
- Select and plan other learning activities to assist learners acquire, develop and demonstrate the subject specific practices and Core Competencies outlined under the specific indicators and exemplars of each content standard of the sub-strands/strands in addition to what have been suggested
- Bear in mind that the curriculum cannot be taken as a substitute for lesson plans. It is therefore, necessary that teachers develop a scheme of work and lesson plans for teaching the indicators and exemplars of this curriculum.

Note:

- Career Technology should be taught as a practical subject. It is basically for acquisition of practical skills. Learners are to be taught and evaluated practically.
- Though learners are to be taken through some theoretical lessons, these are to be reinforced through their learning of designing, idea conceptualisation, brainstorming and critical thinking to find solutions to identified problems.
- Learners must observe, listen, describe, reflect, brainstorm, discuss, design, make, test, evaluate and report.

NATIONAL COUNCIL FOR
CURRICULUM & ASSESSMENT

NOT FOR SALE
BUT FOR TRAINING PURPOSES

SKILLS AND PROCESSES

These are specific activities or tasks that indicate performance or proficiency in the learning of Career Technology. They are useful benchmarks for planning lessons, developing exemplars and are the core of inquiry-based learning.

Practical Skills

Practical skills refer generally to the psychomotor domain. This involves the demonstration of manipulative skills using tools/equipment and materials to carry out practical operations, pre-image to solve practical problems, and produce items. The teaching and assessment of practical skills should involve projects, case studies and creative practical tasks. The basic skills required for effective practical work are the following:

1. Handling of Tools/Equipment/Materials (manipulative skills)
2. Observation
3. Craftsmanship
4. Perception
5. Creativity
6. Communication

Handling of Tools/Equipment/Materials (Manipulative Skills): The learner should be able to handle and use tools/equipment/materials properly for practical skills through creative activities.

Observation: The learners should be able to use their senses to make accurate observation of skills and techniques during demonstrations. The learners in this case should be able to apply or imitate the techniques they have observed for performing other tasks.

Craftsmanship: This involves the skilful and efficient handling of materials and tools for accomplishing specific tasks according to the level of the learners.

Perception: The learners should be able to respond to their environment using all the senses (seeing, hearing, smelling, touching, tasting and movement or kinaesthetic. The learner should be encouraged to apply these senses to every project that is undertaken.

Originality/Creativity: The learners should be encouraged to be creative or original and be able to use new methods in carrying out projects to be original in making own artefacts/products, and not to copy existing work. The teacher should help the learners to be creative and original by encouraging any little creative effort, technique and product they may develop.

Communication: The learners should be guided to develop effective oral and written communication skills necessary for group work, reporting and appreciation.

Note: The action verbs provided under the various Profile Dimensions should help the teacher to structure the teaching such as to achieve the set objectives. Select from the action verbs provided for teaching, in evaluating learning before, during and after the instruction.

Attitudes and Values

To be effective, competent and reflective citizens, who will be willing and capable of solving personal and societal problems, learners should be exposed to situations that challenge them to raise questions and attempt to solve problems. Learners therefore, need to acquire positive attitudes, values and psychosocial skills that will enable them participate in debates and take a stand on issues affecting them and others.

The Career Technology curriculum intends to help learners to acquire the following:

- i. Commitment: determination to contribute to national development.
- ii. Tolerance: willingness to respect the views of others.
- iii. Patriotism: readiness to defend the nation.
- iv. Flexibility in ideas: willingness to change opinion in the face of more plausible evidence.
- v. Respect for evidence: willingness to collect and use data in one's investigation, and also have respect for data collected by others.
- vi. Reflection: the habit of critically reviewing ways in which an investigation or observation has been carried out to see possible faults and other ways in which the investigation or observation can be improved upon.
- vii. Comportment: conforming to acceptable societal norms.
- viii. Co-operation: the ability to work effectively with others.
- ix. Responsibility: the ability to act independently and make decisions, and be morally accountable for one's action; capable of rational conduct.
- x. Environmental Awareness: being conscious of one's physical and socio- economic surroundings.
- xi. Respect for the Rule of Law: obeying the rules and regulations of the land.

The teacher should ensure that learners cultivate the above attitudes and skills as basis for living in the nation as effective citizens.

Values

At the heart of this curriculum is the belief in nurturing honest, creative and responsible citizens. As such, every part of this curriculum, including the related pedagogy, should be consistent with the following set of values:

Respect: This includes respect for the nation of Ghana, its institutions and laws and the culture and respect among its citizens and friends of Ghana.

Diversity: Ghana is a multicultural society in which every citizen enjoys fundamental rights and responsibilities. Learners must be taught to respect the views of all persons and to see national diversity as a powerful force for nation development. The curriculum should promote social cohesion.

Equity: The socio-cultural and economic development across the country is uneven. Consequently, it is necessary to be deliberate in addressing the specific needs of learners and to ensure an equitable distribution of resources. Ghana's learners have varied needs influenced by their gender, abilities, economic status, geographical background etc. which require the provision of equal opportunities for all to promote life-long learning.

Commitment to achieving excellence: Learners must be taught to appreciate the opportunities provided through the curriculum and persist in doing their best in any field of endeavour as global citizens. The Career Technology curriculum encourages innovativeness through creative and critical thinking and the use of contemporary technologies.

Teamwork/Collaboration: Learners are encouraged to be committed to team-oriented working and learning environments. This also means that learners should have an attitude of tolerance to live peacefully with all persons.

Truth and Integrity: Learners will be helped to develop learners into individuals who will consistently tell the truth irrespective of the consequences. In addition, be morally upright with the attitude of doing the right thing even when no one is watching. They will be true to themselves and be willing to live the values of honesty and compassion. Equally important, is the practice of positive values as part of the ethos or culture of the workplace, which includes integrity and perseverance. These values underpin the learning processes to allow learners to apply skills and competencies in the world of work.

NATIONAL COUNCIL FOR
CURRICULUM & ASSESSMENT

NOT FOR SALE
BUT FOR TRAINING PURPOSES

ASSESSMENT IN THE CCP

Assessment is a process of collecting and evaluating information about learners and using the information to make decisions to improve their learning. Assessment may be formative, summative, diagnostic, or evaluative depending on its purpose. It is integral to the teaching-learning process, promotes student learning and improves instruction. In CCP, it is suggested that assessment involves assessment for learning, assessment of learning and assessment as learning, which are described in the subsequent paragraphs.

In Career Technology, it must be emphasised that all forms of assessment are based on the 3 domains of learning. In developing assessment procedures, try to select indicators in such a way that you will be able to assess a representative sample from a given strand. Each indicator in the curriculum is considered a criterion to be achieved by the learners. When you develop assessment items or questions that are based on a representative sample of the indicators taught, the assessment is referred to as a “Criterion-Referenced Assessment”. In many cases, a teacher cannot assess all the indicators taught in a term or year. The assessment procedure you use i.e. class assessments, homework, projects and group work presentations must be developed in such a way that the various procedures complement each other to provide a representative sample of indicators taught over a period of time.

Assessment for Learning (AfL)

Assessment for Learning (AfL) is the process of seeking and interpreting evidence for use by learners and their teachers to decide where the learner is in their learning, where they need to be (the desired goal), and how best to get them there. AfL is one of the most suitable methods for improving learning and raising standards (Black and William, 1998). Assessment for Learning also refers to all the activities undertaken by teachers and/or by their learners, which provide information to be used as feedback to modify the teaching and learning activities in which they are engaged. AfL can be achieved through processes such as sharing criteria with learners, effective questioning, and feedback.

AfL, therefore, provides timely feedback to ensure individual learners are assisted during the teaching and learning process using various strategies and questioning to measure the learning that has actually taken place. It is a continuous process that happens at all stages of the instructional process to monitor the progress of a learner and to offer feedback or change teaching strategies to achieve [performance standards of a lesson.

Assessment of Learning (AoL)

Assessment of learning provides a picture of the achieved standards of the teacher and performance of students at the terminal stage of the learning process. This information provides data for accountability and educational decisions such as grading, selection and placement, promotion and certification. Through AoL, stakeholders such as parents and guardians are informed about the extent students have attained expected learning outcomes at the end of their grade or programme.

Assessment as Learning (AaL)

Assessment as Learning develops and supports students' sense of ownership and efficacy about their learning through reflective practices. This form of self-assessment helps in building the competencies of learners to achieve deeper understanding of what their own learning and what they are taught.

Assessment as Learning is about the ongoing self-assessment by students in order to monitor their own learning, which is “characterised by students reflecting on their own learning and making adjustments so that they achieve deeper understanding.” (*Western and Northern Canadian Protocol for Collaboration in Education [WNCPE], 2006, p.41*)

Learners must be guided through the process of understanding their own cognitive processes so that students learn to monitor their own learning and make adjustments

What do we assess?

- Emphasis in assessment in the CCP is on the Common Core Learner Attributes, which are essential outcomes in the three domains of learning (i.e. cognitive, psychomotor and affective).
- Knowledge and skills with emphasis on the 4Rs in the learning areas
- Core competencies with emphasis on attitudes and values developed through the learning and its context as well as the pedagogical approaches.
- The process is illustrated diagrammatically in Figure 2.

Figure 2 Essential Assessment Features

How do we monitor progress?

School-Based Assessment (SBA) covers all forms/modes of assessment including AfL, AaL and AoL (see Table 1), that can be undertaken by any school-level actor (learner, teacher, head teacher) to monitor the learner's achievement over a period of time. Data collection and keeping records of the data are central to the conduct of SBA.

Table 1 Modes of Assessment

Assessment for Learning	Assessment of Learning	Assessment as Learning
Class exercises	Class Assessment Task (CAT)	Portfolio
Quizzes	End of term assessment	Journal entries
Class tests (written, oral, aural and/or practical)	End of year assessment	Project work
Class Assessment Task (CAT)		Checklist
		Questionnaire

The following are samples of relevant records that can be kept on the student's learning.

- Student's Progress Record (Cumulative Record)
- Student's Report Card
- School-Based Assessment Termly Recording Register

Details of guidelines on SBA can be found in *the National Pre-tertiary Learning Assessment Framework (NPLAF)* document (Ministry of Education, 2020a) and *the School-Based Assessment Guidelines* (Ministry of Education, 2020b).

Reporting School-Based Assessment (SBA) in the CCP

The CCP uses a criterion-referenced model of presenting and reporting school-based assessment data. School-based assessment throughout the three-year duration of CCP, is done against criteria linked to performance standards and not against the work of other learners. The CCP provides levels of proficiency to be attained and descriptors for all grade levels of the programme (see Table 2). These levels and descriptors cannot be changed by individual schools and are, therefore, common to all learners as well as learning areas nationwide. For each assessment criterion or (benchmark for the level of proficiency), a number of descriptors are defined as shown in Table 2.

Table 2: Benchmarks, levels of proficiency and the grade level descriptors

Level of Proficiency	Benchmark	Grade Level Descriptor
1: Highly proficient (HP)	80% +	Learner shows high level of proficiency in knowledge, skills and values and can transfer them automatically and flexibly through authentic performance tasks.
2: Proficient (P)	68-79%	Learner demonstrates sufficient level of proficient knowledge, skills and core understanding; can transfer them independently through authentic performance tasks.
3: Approaching Proficiency (AP)	54-67%	Learner is approaching proficiency in terms of knowledge, skills and values with little guidance and can transfer understanding through authentic performance tasks.

4: Developing (D)	40-53%	Learner demonstrates developing level of knowledge, skills and values but needs help throughout the performance of authentic tasks.
Level of Proficiency	Benchmark	Grade Level Descriptor
5: Emerging (E)	39% and below	Learner is emerging with minimal understanding in terms of knowledge, skills, and values but needs a lot of help.

The grading system presented, shows the letter grade system and equivalent grade boundaries. In assigning grades to pupils' test results, or any form of evaluation, the above grade boundaries and the descriptors may be applied. The descriptors Highly Proficient [HP], Proficient [P], Approaching Proficiency [AP], Developing [D], Emerging [E]), indicate the meaning of each grade.

In addition to the school-based assessment (SBA), a national standards assessment test is conducted in Basic 8 to provide national level indicators on learners' achievement.

NOT FOR SALE
BUT FOR TRAINING PURPOSES

CREATIVE PEDAGOGICAL APPROACHES

These are the methods, strategies and relevant teaching and learning resources for ensuring that every learner benefits from the teaching and learning process. The curriculum emphasises the:

1. creation of learning-centred classrooms through the use of creative approaches to ensure learner empowerment and independent learning;
2. positioning of inclusion and equity at the centre of quality teaching and learning;
3. use of differentiation and scaffolding as teaching and learning strategies for ensuring that no learner is left behind;
4. use of Information Communication Technology (ICT) as a pedagogical tool;
5. identification of subject specific instructional expectations needed for making learning in the subject relevant to learners;
6. integration of assessment as learning, for learning and of learning into the teaching and learning process and as an accountability strategy; and
7. questioning techniques that promote deep learning.

Learning-Centred Pedagogies

The learner is at the centre of learning. At the heart of the CCP curriculum is the learning progression and improvement of learning outcomes for Ghana's young people with a focus on the 4Rs—Reading, wRiting, aRithmetic and cReativity. It is expected that at each curriculum phase, learners would be offered the essential learning experiences to progress seamlessly to the next phase. Where there are indications that a learner is not sufficiently ready for the next phase a compensatory provision through differentiation should be provided to ensure that such a learner is ready to progress with their cohort.

The curriculum encourages the creation of a learning-centred classroom with the opportunity for learners to engage in meaningful “hands-on” activities that bring home to the learner what they are learning in school and what they know from outside of school. The learning-centred classroom is a place for the learners to discuss ideas through the inspiration of the teacher. The learners then become actively engaged in looking for answers, working in groups to solve problems. They also research information, analyse and evaluate information. The aim of the learning-centred classroom is to enable learners to take ownership of their learning. It provides the opportunity for deep and profound learning to take place.

The teacher as a facilitator needs to create a learning environment that:

1. makes learners feel safe and accepted,
2. helps learners to interact with varied sources of information in a variety of ways,
3. helps learners to identify a problem suitable for investigation through project work,
4. connects the problem with the context of the learners' world so that it presents realistic opportunities for learning,

5. organises the subject matter around the problem, not the subject,
6. gives learners responsibility for defining their learning experience and planning to solve the problem,
7. encourages learners to collaborate in learning,
8. expects all learners to demonstrate the results of their learning through a product or performance.

It is more productive for learners to find answers to their own questions rather than teachers providing the answers and their opinions in a learning-centred classroom.

Inclusion

Inclusion is ensuring access and learning for all learners, especially, those disadvantaged. All learners are entitled to a broad and balanced curriculum in every school in Ghana. The daily learning activities to which learners are exposed should ensure that the learners' right to equal access and accessibility to quality education is met. The curriculum suggests a variety of approaches that addresses learners' diversity and their special needs in the learning process. When these approaches are effectively used in lessons, they will contribute to the full development of the learning potential of every learner. Learners have individual needs and learning experiences and different levels of motivation for learning. Planning, delivery and reflection on daily learning experiences should take these differences into consideration.

The curriculum therefore, promotes:

1. learning that is linked to the learner's background and to their prior experiences, interests, potential and capacities.
2. learning that is meaningful because it aligns with learners' ability (e.g. learning that is oriented towards developing general capabilities and solving the practical problems of everyday life); and
3. the active involvement of the learners in the selection and organisation of learning experiences, making them aware of their importance and also enabling them to assess their own learning outcomes.

Differentiation and Scaffolding

Differentiation is a process by which differences (learning styles, interest and readiness to learn) between learners are accommodated so that all learners in a group have the best chance of learning. Differentiation could be by content, tasks, questions, outcome, groupings and support. Differentiation as a way of ensuring each learner benefits adequately from the delivery of the curriculum can be achieved in the classroom through (i) Task (ii) Support from the Guidance and Counselling Unit and (iii) Learning outcomes.

Differentiation by task involves teachers setting different tasks for learners of different abilities. For example, in sketching the plan and shape of their classroom some learners could be made to sketch with free hand while others would be made to trace the outline of the plan.

Differentiation by support involves the teacher giving needed support and referring weak learners to the Guidance and Counselling Unit for academic support.

Differentiation by outcome involves the teacher allowing learners to respond at different levels. Weaker learners are allowed more time for complicated tasks.

Scaffolding in education refers to the use of a variety of instructional techniques aimed at moving learners progressively towards stronger understanding and ultimately greater independence in the learning process.

It involves breaking up the learning task, experience or concepts into smaller parts and then providing learners with the support they need to learn each part. The process may require a teacher assigning an excerpt of a longer text to learners to read and engaging them to discuss the excerpt to improve comprehension. The teacher goes ahead to guide them through the key words/ vocabulary to ensure learners have developed a thorough understanding of the text before engaging them to read the full text.

Common scaffolding strategies available to the teacher are:

1. give learners a simplified version of a lesson, assignment, or reading, and then gradually increases the complexity, difficulty, or sophistication over time;
2. describe or illustrate a concept, problem, or process in multiple ways to ensure understanding;
3. give learners an Exemplar(s): or model of an assignment they will be asked to complete;
4. give learners a vocabulary lesson before they read a difficult text;
5. describe the purpose of a learning activity clearly and the learning goals they are expected to achieve; and
6. describe explicitly how the new lesson builds on the knowledge and skills learners were taught in a previous lesson.

Information Communication Technology

Information Communication Technology (ICT) has been integrated into the Career Technology curriculum as part of the core of education, alongside reading, writing and numeracy. Thus, the curriculum is designed to use ICT as a teaching and learning tool to enhance deep and independent learning. For instance, the teacher in certain instances is directed to use multimedia to support the teaching and learning process.

ICT has the potential to innovate, accelerate, enrich, and deepen skills. It also motivates and engages learners to relate school experiences to work practices. It provides opportunities for learners to fit into the world of work.

Some of the expected outcomes that this curriculum aims to achieve are:

1. improved teaching and learning processes;
2. improved consistency and quality of teaching and learning;
3. increased opportunities for more learner-centred pedagogical approaches;

4. improved inclusive education practices;
5. improved collaboration, creativity, higher order thinking skills; and
6. enhanced flexibility and differentiated approach of delivery.

The use of ICT as a teaching and learning tool is to provide learners access to large quantities of information online and offline. It also provides the framework for analysing data to investigate patterns and relationships in the computing context. Once learners have made their findings, ICT can help them organise, edit and print the information in many different ways.

Learners need to be exposed to various ICT tools around them including calculators, radios, cameras, phones, television sets and computers and related software like Microsoft Office packages—Word, PowerPoint and Excel as teaching and learning tools. The exposure that learners are given from JHS 1-JHS3 (Basic 7 – Basic 9) to use ICT in exploiting learning will build their confidence and will increase their level of motivation to apply ICT use in later years, both within and outside of education. ICT use for teaching and learning is expected to enhance the quality and competence level of learners.

CORE COMPETENCIES

In using this curriculum, we hope that certain core competencies will be developed in learners to help them develop our country, Ghana. These competencies include:

Critical Thinking and Problem Solving (CP)

This skill develops learners' cognitive and reasoning abilities to enable them analyse and solve problems. Critical thinking and problem-solving skill enable learners to draw on their own experiences to analyse situations and choose the most appropriate out of a number of possible solutions. It requires that learners embrace the problem at hand, persevere and take responsibility for their own learning.

Creativity and Innovation (CI)

Creativity and innovation promote the development of entrepreneurial skills in learners through their ability to think of new ways of solving problems and developing technologies for addressing the problem at hand. It requires ingenuity of ideas, arts, technology and enterprise. Learners having this skill are also able to think independently and creatively.

Communication and Collaboration (CC)

This competence promotes in learners the skills to make use of languages, symbols and texts to exchange information about themselves and their life experiences. Learners actively participate in sharing their ideas. They engage in dialogue with others by listening to and learning from them. They also respect and value the views of others.

Cultural Identity and Global Citizenship (CG)

This competence involves developing learners to put country and service foremost through an understanding of what it means to be active citizens. This is done by inculcating in learners a strong sense of social and economic awareness. Learners make use of the knowledge, skills, competencies and attitudes acquired to contribute effectively towards the socioeconomic development of the country and on the global stage. Learners build skills to critically identify and analyse cultural and global trends that enable them to contribute to the global community

Personal Development and Leadership (PL)

This competence involves improving self-awareness and building self-esteem. It also entails identifying and developing talents, fulfilling dreams and aspirations. Learners are able to learn from mistakes and failures of the past. They acquire skills to develop other people to meet their needs. It involves recognising the importance of values such as honesty and empathy and seeking the well-being of others. Personal development and leadership enable learners to distinguish between right and wrong. The skill helps them to foster perseverance, resilience and self-confidence. It helps them acquire the skill of leadership, self-regulation and responsibility necessary for lifelong learning.

Digital Literacy (DL)

Digital Literacy involves developing learners to discover, acquire, and communicate through ICT to support their learning. It also makes them use digital media responsibly.

NB: Refer to Appendix I for details of the core competencies.

**NOT FOR SALE
BUT FOR TRAINING PURPOSES**

INSTRUCTIONAL EXPECTATIONS OF CAREER TECHNOLOGY

Career Technology teachers are expected to respect each learner's unique individual ability and put in place appropriate teaching and learning strategies to meet the unique needs of the individual learner. The approach is intended to create the awareness that each learner has distinctive skills, talents and capabilities. This approach requires the application of a range of different pedagogical strategies that place emphasis on the needs of individual learners. The most important thing is that they are always ready to participate in Career Technology lessons. The expectations of Career Technology instructions could be achieved through the following:

Classroom, workshop/site and laboratory discussions, to guide learners to be aware that creative activities are used to solve identified problems. For example:

1. The Career Technology products are used to provide food, clothing, shelter and furniture for our homes, schools, churches, mosques, palaces and work places. The Career Technology subjects can provide job opportunities for various endeavours in life.
2. Lead learners to identify problems in their environment; home, school and community that affect the individual, family, community and the country.
3. Guide learners to discuss the effects of these problems on their education, health and sanitation, cultural beliefs and practices, job creation and employment, etc.
4. Lead learners to investigate the causes of these problems through interviews, visits, observations, reading and group or class discussions, etc.
5. Guide learners through brainstorming, discussions, exploration with available tools, materials, instruments and techniques (individually or in groups) to design and create projects to help solve identified problems.
6. Get learners to plan, display and share their artefacts through exhibitions and performances with peers and other members of the community.
7. Guide learners to appreciate, appraise and critique their works, document the outcomes, reflect creatively on their findings and use the feedback to make modifications or undertake new projects.

SUGGESTED TIME ALLOCATION

For effective teaching and learning of the Career Technology subject, a total of **Four (4)** periods a week with each period consisting of **50** minutes (all making 200 minutes) is allocated. It is suggested that teachers be given **Two (2)**-double periods (100 minutes) for two days in a week on the school time table to handle the subject. The six (6) Strands with all their Sub-strands should be harmonised and every aspect given the needed attention. It is suggested that teachers of Career Technology teach one strand after the other in alternate weeks. This means, teaching and learning of the Career Technology curriculum in the subsequent weeks must be in line to ensure full coverage of the curriculum.

SUGGESTIONS FOR HANDLING THE CAREER TECHNOLOGY (CT) CURRICULUM.

Effective and efficient use of time allotted to the CT subject:

The Career Technology Curriculum has been allotted Four (4) periods (50 minutes per period) making a total of 200 minutes per week. It is however, suggested that teachers be given **two-double periods** (100 continues minutes per session, times two, making 200 minutes) per week to enable them deliver the practical lessons and to be able to fully cover the curriculum. Under no circumstance that the CT periods be diverted or given to any subject/programme. Metro/Municipal/District Directors of Education, School Improvement Support Officers (SISO), Head Teachers and CT Teachers should therefore, ensure that the periods allotted to the subject are strictly adhered to and used judiciously.

Teachers required to handle the CT subject

The Career Technology Curriculum has been designed to be handled by one teacher. However, two or more teachers will be required initially to handle the subject since teachers need to be trained to handle both Home Economics and Pre-Technical Skills aspects.

It is hoped that effective in-service training and pre-service training will be organized for teachers to be able to individually handle the subject effectively.

Metropolitan/Municipal/District Directors of Education (MMDDE) should make sure that, at least two teachers are made available in a school to be able to handle the subject with ease, until such a time that CT teachers are effectively trained to single-handedly handle the subject effectively and efficiently.

ORGANISATION AND STRUCTURE OF CAREER TECHNOLOGY CURRICULUM

The Career Technology Curriculum has been structured into four columns, namely; Strands, Sub-strands, Content Standards and Indicators with Exemplars.

Organisation

The curriculum is organised under the following key headings:

Strands are the broad learning areas of the content to be studied.

Sub-strands are the sub-divisions of the broad learning areas or strands.

Content standards are the expected level of knowledge, skill and/or attitude that a learner must attain at each grade level.

Indicators are the distinct outcomes that learners must exhibit for each content standard at each level of learning.

Exemplars clearly explain the distinct outcomes or indicators. They support and guide the facilitator/teacher in helping learners to achieve the content standards.

Structure of Career Technology Curriculum

The structure of the Career Technology Curriculum is presented in Table 3 below. The Table shows the columns which indicate the strands, sub-strands, content standards and the indicators with the accompanying exemplars with reference numbers for effective planning.

Table 3: Structure of Career Technology Curriculum

STRAND	SUB-STRAND	CONTENT STANDARD	INDICATOR(S) with Exemplars
B7/JHS1. 1	B7/JHS1.1.1	B7/JHS1.1.1.1	B7/JHS1.1.1.1.1

A unique annotation is used for numbering the learning indicators in the curriculum for the purpose of easy referencing as indicated in Table 4, below.

<p>B7/JHS1.5.1.1 Demonstrate knowledge and skills of drawing materials, instruments, lines and their applications, and freehand sketching CONT'D</p>	<p>B7/JHS1.5.1.1.2: Discuss the types of lines used in graphic communication</p> <ol style="list-style-type: none"> 1. Identify lines used in communicating ideas. E.g., horizontal lines, vertical lines, inclined lines, arcs, continuous thick and thin lines, short dashes, 2. Describe the features and uses of the lines. E.g. - Continuous thick lines—for drawing outlines; - Continuous thin lines—for drawing construction lines 3. Illustrate the applications of lines in drawn objects. E.g., indicate how a dimension line is used for showing dimensions on an object 4. Make a chart of how the lines are applied on drawings. 5. Present the chart for appraisal. 	<p>CP6.5: Ability to select alternatives that adequately meet selected criteria.</p> <p>CI 6.10: Reflect on work and explore thinking behind thoughts and processes.</p>

NOT FOR SALE
 BUT FOR TRAINING PURPOSES

B7/JHS1.5.1.1.3: Make sketches of lines, curves, objects, and write the letterings

1. Identify lower and upper-case letters.

E.g.

- Lowercase—a, b, c, d

- Upper case—A, B, C, D

2. Discuss the principles of lettering.

E.g.

- Titles should be 8mm high.

- General information is usually about 6mm high.

Note: Titles and dimensions are usually written in upper case.

3. Set out drawing paper and prepare title block indicating name, school, class, date and drawing number.

CP6.5: Ability to select alternatives that adequately meet selected criteria.

CC 8.2: Explain ideas in a clear order with relevant details

CI 5.2: Ability to merge simple/complex ideas to create novel things.
