## FOREWORD

The new curriculum for Ghana's primary schools is standards-based, which is our demonstration of placing learning at the heart of every classroom and ensuring that every learner receives quality education. Provision of accessible quality education for all is non-negotiable if we are to meet the human capital needs of our country, required for accelerated sustainable national development. It is for this reason that the new curriculum sets out clearly the learning areas that need to be taught, how they should be taught and how they should be assessed. It provides a set of core competencies and standards that learners are to know, understand and demonstrate as they progress through the curriculum from one content standard to the other and from one phase to the next. The curriculum and its related teachers' manual promote the use of inclusive and gender responsive pedagogy within the context of learning-centred teaching methods so that every learner can participate in every learning process and enjoy learning. The curriculum encourages the use of Information and Communication Technologies (ICTs) for teaching and learning – ICTs as teaching and learning materials.

The new curriculum has at its heart the acquisition of skills in the 4Rs of Reading, wRiting, aRithmetic and cReativity by all learners. It is expected that at any point of exit from a formal education, all learners should be equipped with these foundational skills for life, which are also prerequisites for Ghana becoming a learning nation. The graduates from the school system should become functional citizens in the 4Rs and lifelong learners. They should be digital literates, critical thinkers and problem solvers. The education they receive through the study of the learning areas in the curriculum should enable them to collaborate and communicate well with others and be innovative. The graduates from Ghana's schools should be leaders with a high sense of national and global identity. The curriculum therefore provides a good opportunity in its design to develop individuals with the right skills and attitudes to lead the transformation of Ghana into an industrialised learning nation.

For this reason, the Ministry of Education expects that learners, as a result of the new knowledge, skills and values they have acquired through the new curriculum, will show a new sense of identity as creative, honest and responsible citizens. These are our core values that underpin the identification and selection of the learning areas for this curriculum. These core values serve as fundamental building blocks for developing into our learners the spirit of teamwork, respect, resilience and the commitment to achieving excellence. The Ministry endorses a quality learning experience as an entitlement for each of Ghana's school-going girl and boy; the curriculum has rightly focused on learning and learning progression. The Ministry has also endorsed accountability as a critical domain for effective workings of standards-based curriculum.

More importantly the role of the teacher is to make this curriculum work for the intended purpose - to inculcate in learners the core competencies and values and to make learning happen; improve learning outcomes – and the support that teachers need is duly recognised and endorsed by my Ministry. The Ministry will support the implementation of the curriculum to include capacity development of all teachers in the new curriculum. Teachers matter in the development and delivery of the standards-based curriculum and we will continue to support our teachers on this journey that we have started together to put learning at the centre of what we do best; teach!

I thank all those who have contributed their time and expertise to the development of this curriculum for primary schools in Ghana.

Dr. Matthew Opoku Prempeh (MP)  
The Honourable Minister of Education

## **RATIONALE FOR PRIMARY MATHEMATICS**

Mathematics forms an integral part of our everyday lives. It is a universal truth that development is hinged on Mathematics is the backbone of social, economic, political and physical development of a country. It is a never-ending creative process which serves to promote discovery and understanding. It consists of a body of knowledge which attempts to explain and interpret phenomena and experiences. Mathematics has changed our lives and is vital to Ghana's future development.

To provide quality Mathematics education, teachers must facilitate learning in the Mathematics classroom. This will provide the foundations for discovering and understanding the world around us and lay the grounds for Mathematics and Mathematics related studies at higher levels of education. Learners should be encouraged to understand how Mathematics can be used to explain what is occurring, predict how things will behave and analyse causes and origins of things in our environment. The Mathematics curriculum has considered the desired outcomes of education for learners at the basic level. Mathematics is also concerned with the development of attitudes. It is important for all citizens to be mathematically and technologically literate for sustainable development. Mathematics therefore ought to be taught using hands-on and minds-on approaches which learners will find as fun and adopt as a culture.

## **PHILOSOPHY**

- **Teaching Philosophy**

Ghana believes that an effective mathematics education needed for sustainable development should be inquiry-based. Thus mathematics education must provide learners with opportunities to expand, change, enhance and modify the ways in which they view the world. It should be pivoted on learner-centred mathematics teaching and learning approaches that engage learners physically and cognitively in the knowledge-acquiring process in a rich and rigorous inquiry-driven environment.

- **Learning Philosophy**

Mathematics learning is an active contextualised process of constructing knowledge based on learners' experiences rather than acquiring it. Learners are information constructors who operate as researchers. Teachers serve as facilitators by providing the enabling environment that promotes the construction of learners' own knowledge, based on their previous experiences. This makes learning more relevant to the learner and leads to the development of critical thinkers and problem solvers.

## **GENERAL AIMS**

The curriculum is aimed at developing individuals to become mathematically literate, good problem solvers, have the ability to think creatively and have both the confidence and competence to participate fully in Ghanaian society as responsible local and global citizens.

## **SUBJECT AIMS**

The mathematics curriculum is designed to help learners to:

1. recognise that mathematics permeates the world around us;
2. appreciate the usefulness, power and beauty of Mathematics;
3. enjoy Mathematics and develop patience and persistence when solving problems;
4. understand and be able to use the language, symbols and notation of Mathematics; and
5. develop mathematical curiosity and use inductive and deductive reasoning when solving problems;
6. become confident in using mathematics to analyse and solve problems both in school and in real-life situations;

7. develop the knowledge, skills and attitudes necessary to pursue further studies in Mathematics; and
8. develop abstract, logical and critical thinking and the ability to reflect critically upon their work and the work of others.

## **INSTRUCTIONAL EXPECTATIONS**

1. Guide and facilitate learning by generating discourse among learners and challenging them to accept and share responsibility for their own learning, based on their unique individual differences.
2. Select Mathematics content, adapt and plan lessons to meet the interests, knowledge, understanding, abilities and experiences of learners.
3. Work together as colleagues within and across disciplines and grade levels to develop communities of Mathematics learners who exhibit the skills of mathematical inquiry and the attitudes and social values conducive to Mathematics learning.
4. Use multiple methods and systematically gather data about learner understanding and ability to guide Mathematics teaching and learning, with arrangements to provide feedback to both learners and parents.
5. Design and manage learning environments that provide learners with the time, space and resources needed for learning mathematics

## **CORE COMPETENCIES**

The core competencies for studies describe a body of skills that teachers in Mathematics at all levels should seek to develop in their learners. They are ways in which teachers and learners in Mathematics engage with the subject matter as they learn the subject. The competencies presented here describe a connected body of core skills that are acquired throughout the processes of teaching and learning.

### **CRITICAL THINKING AND PROBLEM SOLVING (CP)**

This skill develops learners' cognitive and reasoning abilities to enable them analyse and solve problems. Critical thinking and problem-solving skill enables learners to draw on their own experiences to analyse situations and choose the most appropriate out of a number of possible solutions. It requires that learners embrace the problem at hand, persevere and take responsibility for their own learning.

### **CREATIVITY AND INNOVATION (CI)**

Creativity and Innovation promotes entrepreneurial skills in learners through their ability to think of new ways of solving problems and developing technologies for addressing the problem at hand. It requires ingenuity of ideas, arts, technology and enterprise. Learners having this skill are also able to think independently and creatively.

### **COMMUNICATION AND COLLABORATION (CC)**

This competence promotes in learners the skills to make use of languages, symbols and texts to exchange information about themselves and their life experiences. Learners actively participate in sharing their ideas. They engage in dialogue with others by listening to and learning from them. They also respect and value the views of others.

## **CULTURAL IDENTITY AND GLOBAL CITIZENSHIP (CG)**

This competence involves developing learners to put country and service foremost through an understanding of what it means to be active citizens. This is done by inculcating in learners a strong sense of social and economic awareness. Learners make use of the knowledge, skills, COMPETENCIES and attitudes acquired to contribute effectively towards the socioeconomic development of the country and on the global stage. Learners build skills to critically identify and analyse cultural and global trends that enable them to contribute to the global community.

## **PERSONAL DEVELOPMENT AND LEADERSHIP (PL)**

This competence involves improving self-awareness and building self-esteem. It also entails identifying and developing talents, fulfilling dreams and aspirations. Learners are able to learn from mistakes and failures of the past. They acquire skills to develop other people to meet their needs. It involves recognising the importance of values such as honesty and empathy and seeking the well-being of others. Personal development and leadership enables learners to distinguish between right and wrong. The skill helps them to foster perseverance, resilience and self-confidence. PL helps them acquire the skill of leadership, self-regulation and responsibility necessary for lifelong learning.

## **DIGITAL LITERACY (DL)**

Digital Literacy develop learners to discover, acquire, and communicate through ICT to support their learning. It also makes them use digital media responsibly.

## **LEARNING DOMAINS (EXPECTED LEARNING BEHAVIORS)**

A central aspect of this curriculum is the concept of three integral learning domains that should be the basis for instruction and assessment. These are

- Knowledge, Understanding and Application
- Process Skills
- Attitudes and Values

## KNOWLEDGE, UNDERSTANDING AND APPLICATION

Under this domain, learners may acquire some knowledge through some learning experiences. They may also show understanding of concepts by comparing, summarising, re-writing etc. in their own words and constructing meaning from instruction. The learner may also apply the knowledge acquired in some new contexts. At a higher level of learning behaviour, the learner may be required to analyse an issue or a problem. At a much higher level, the learner may be required to synthesize knowledge by integrating a number of ideas to formulate a plan, solve a problem, compose a story, or a piece of music. Further, the learners may be required to evaluate, estimate and interpret a concept. At the last level, which is the highest, learners may be required to create, invent, compose, design and construct. These learning behaviours “knowing”, “understanding”, “applying”, “analysing”, “synthesising”, “evaluating” and “creating” fall under the domain “Knowledge, Understanding and Application”.

In this curriculum, learning indicators are stated with action verbs to show what the learner should know and be able to do. For example, the learner will be able to describe something. Being able to “describe” something after teaching and learning has been completed means that the learner has acquired “knowledge”. Being able to explain, summarise, and give examples etc. means that the learner has understood the concept taught.

Similarly, being able to develop, defend, etc. means that the learner can “apply” the knowledge acquired in some new context. You will note that each of the indicators in the curriculum contains an “action verb” that describes the behaviour the learner will be able to demonstrate after teaching and learning has taken place. “Knowledge, Understanding and Application” is a domain that should be the prime focus of teaching and learning in schools. Teaching in most cases has tended to stress knowledge acquisition to the detriment of other higher level behaviours such as applying knowledge.

Each action verb in any indicator outlines the underlying expected outcome. Each indicator must be read carefully to know the learning domain towards which you have to teach. The focus is to move teaching and learning from the didactic acquisition of “knowledge” where there is fact memorisation, heavy reliance on formulae, remembering facts without critiquing them or relating them to real world – **surface learning** – to a new position called – **deep learning**. Learners are expected to deepen their learning by knowledge application to develop critical thinking skills, explain reasoning, and to generate creative ideas to solve real life problems in their school lives and later in their adult lives. This is the position where learning becomes beneficial to the learner.

The explanation and the key words involved in the “Knowledge, Understanding and Application” domain are as follows:

- Knowing:** The ability to remember, recall, identify, define, describe, list, name, match, state principles, facts, concepts. Knowledge is the ability to remember or recall material already learned and this constitutes the lowest level of learning.
- Understanding:** The ability to explain, summarise, translate, rewrite, paraphrase, give examples, generalise, estimate or predict consequences based upon a trend. Understanding is generally the ability to grasp the meaning of some material that may be verbal, pictorial, or symbolic.
- Applying:** This dimension is also referred to as “Use of Knowledge”. Ability to use knowledge or apply knowledge, apply rules, methods, principles, theories, etc. to situations that are new and unfamiliar. It also involves the ability to produce, solve, plan, demonstrate, discover etc.

- Analysis:** The ability to break down material/information into its component parts; to differentiate, compare, distinguish, outline, separate, identify significant points etc., ability to recognise unstated assumptions and logical fallacies; ability to recognise inferences from facts etc.
- Synthesising:** The ability to put parts together to form a new whole. It involves the ability to combine, compile, compose, devise, plan, revise, organise, create, generate new ideas and solutions etc.
- Evaluating:** The ability to appraise, compare features of different things and make comments or judgment, compare, contrast, criticise, justify, support, discuss, conclude, make recommendations etc. Evaluation refers to the ability to judge the worth or value of some material based on some criteria.
- Creating:** The ability to use information or materials to plan, compose, produce, manufacture or construct other products. From the foregoing, creation is the highest form of thinking and learning skill and is therefore the most important behaviour. This unfortunately is the area where most learners perform poorly. In order to get learners to develop critical thinking and behavioural skills beginning right from the lower primary level, it is advised that you do your best to help your learners to develop analytic and application skills as we have said already.

## SKILLS AND PROCESSES

The mathematical method is the means by which a mathematician solves problems or seeks to gain information about events. Learners should be exposed to situations that challenge them to raise questions and attempt to solve problems. The more often they are faced with these challenges, the more likely they are to develop a positive attitude toward mathematics, and the more likely they are to develop the relevant process skills. Details of each sub-skill in the “Values, Attitudes and Process Skills” dimension are as follows:

- Observing** This is the skill of using our senses to gather information about objects or events. This also includes the use of instruments to extend the range of our senses.
- Classifying** This is the skill of grouping objects or events based on common characteristics
- Comparing** This is the skill of identifying the similarities and differences between two or more objects, concepts or processes.
- Communicating/ Reporting -** This is the skill of transmitting, receiving and presenting information in concise, clear and accurate forms verbal, written, pictorial, tabular or graphical
- Predicting** This is the skill of assessing the likelihood of an outcome based on prior knowledge of how things usually turn out.
- Analysing** This is the skill of identifying the parts of objects, information or processes, and the patterns and relationships between these parts.

<b>Generating / possibilities</b>	This is the skill of exploring all the options, possibilities and alternatives beyond the obvious or preferred one.
<b>Evaluating</b>	This is the skill of assessing the reasonableness, accuracy and quality of information, processes or ideas. This is also the skill of assessing the quality and feasibility of objects.
<b>Designing</b>	This is the skill of Visualizing and drawing new objects or gargets from imagination
<b>Measuring</b>	This is the skill of using measuring instruments and equipment for measuring, reading and making observations
<b>Interpreting</b>	This is the skill of evaluating data in terms of its worth: good, bad, reliable, unreliable; making inferences and predictions from written or graphical data; extrapolating and deriving conclusions. Interpretation is also referred to as “Information Handling”.
<b>Recording</b>	This is the skill of drawing or making graphical representation boldly and clearly, well labelled and pertinent to the issue at hand.
<b>Generalising</b>	This is the skill of being able to use the conclusions arrived at in an experiment to what could happen in similar situations
<b>Designing of Experiments</b>	This is the skill of developing hypotheses; planning and designing of experiments; persistence in the execution of experimental activities; modification of experimental activities where necessary in order to reach conclusions. Learners therefore need to acquire positive attitudes, values and psychosocial skills that will enable them participate actively in lessons and take a stand on issues affecting them and others.

## ATTITUDES

To be effective, competent and reflective citizens, who will be willing and capable of solving personal and societal problems, learners should be exposed to situations that challenge them to raise questions and attempt to solve problems. Learners therefore need to acquire positive attitudes, values and psychosocial skills that will enable them participate in debates and take a stand on issues affecting them and others. The mathematics curriculum thus focuses on the development of attitudes and values.

The mathematics curriculum aims at helping learners to acquire the following:

- (i) Commitment: determination to contribute to national development.
- (ii) Tolerance: willingness to respect the views of others.
- (iii) Patriotism: readiness to defend the nation.
- (iv) Flexibility in ideas: willingness to change opinion in the face of more plausible evidence.
- (v) Respect for evidence: willingness to collect and use data on one's investigation, and also have respect for data collected by others.
- (vi) Reflection: the habit of critically reviewing ways in which an investigation or observation has been carried out to see possible faults and other ways in which the investigation or observation can be improved upon.
- (vii) Comportment conforming to acceptable societal norms.
- (viii) Co-operation the ability to work effectively with others.
- (ix) Responsibility: the ability to act independently and make decisions; morally accountable for one's action; capable of rational conduct.
- (x) Environmental Awareness: being conscious of one's physical and socio-economic surroundings.
- (xi) Respect for the Rule of Law: obeying the rules and regulations of the land.

The teacher should ensure that learners cultivate the above attitudes and skills as basis for living in the nation as effective citizens.

## **VALUES:**

At the heart of this curriculum is the belief in nurturing honest, creative and responsible citizens. As such, every part of this curriculum, including the related pedagogy should be consistent with the following set of values.

**Respect:** This includes respect for the nation of Ghana, its institutions and laws and the culture and respect among its citizens and friends of Ghana.

**Diversity:** Ghana is a multicultural society in which every citizen enjoys fundamental rights and responsibilities. Learners must be taught to respect the views of all persons and to see national diversity as a powerful force for nation development. The curriculum promotes social cohesion.

**Equity:** The socio-economic development across the country is uneven. Consequently, it is necessary to ensure an equitable distribution of resources based on the unique needs of learners and schools. Ghana's learners are from diverse backgrounds, which require the provision of equal opportunities to all, and that all strive to care for each other both personally and professionally.

**Commitment to achieving excellence:** Learners must be taught to appreciate the opportunities provided through the curriculum and persist in doing their best in whatever field of endeavour as global citizens. The curriculum encourages innovativeness through creative and critical thinking and the use of contemporary technology.

**Teamwork/Collaboration:** Learners are encouraged to become committed to team-oriented working and learning environments. This also means that learners should have an attitude of tolerance to be able to live peacefully with all persons.

**Truth and Integrity:** The curriculum aims to develop learners into individuals who will consistently tell the truth irrespective of the consequences. In addition, be morally upright with the attitude of doing the right thing even when no one is watching. Also, be true to themselves and be willing to live the values of honesty and compassion. Equally important, the ethos or culture of the work place, including integrity and perseverance, must underpin the learning processes to allow learners to apply skills and COMPETENCIES in the world of work.

The action verbs provided under the various profile dimensions should help you to structure your teaching to achieve desired learning outcomes. Select from the action verbs provided for your teaching, for evaluation exercises and for test construction. Check the weights of the profile dimensions to ensure that you have given the required emphasis to each of the dimensions in your teaching and assessment.

## ASSESSMENT

Assessment is a process of collecting and evaluating information about learners and using the information to make decisions to improve their learning.

In this curriculum, it is suggested that assessment is used to promote learning. Its purpose is to identify the strengths and weaknesses of learners to enable teachers ascertain their learner's response to instruction.

Assessment is both formative and summative. Formative assessment is viewed in terms of Assessment **as** learning and Assessment **for** learning.

**Assessment as learning:** Assessment as learning relates to engaging learners to reflect on the expectations of their learning. Information that learners provide the teacher forms the basis for refining teaching-learning strategies. Learners are assisted to play their roles and to take responsibility of their own learning to improve performance. Learners set their own goals and monitor their progress.

**Assessment for learning:** It is an approach used to monitor learner's progress and achievement. This occurs throughout the learning process. The teacher employs assessment for learning to seek and interpret evidence which serves as timely feedback to refine their teaching strategies and improve learners' performance. Learners become actively involved in the learning process and gain confidence in what they are expected to learn.

**Assessment of learning:** This is summative assessment. It describes the level learners have attained in the learning, what they know and can do over a period of time. The emphasis is to evaluate the learner's cumulative progress and achievement.

It must be emphasised that all forms of assessment should be based on the domains of learning. In developing assessment procedures, try to select indicators in such a way that you will be able to assess a representative sample from a given strand. Each indicator in the curriculum is considered a criterion to be achieved by the learners. When you develop assessment items or questions that are based on a representative sample of the indicators taught, the assessment is referred to as a "Criterion-Referenced Assessment". In many cases, a teacher cannot assess all the indicators taught in a term or year. The assessment procedure you use i.e. class assessments, homework, projects etc. must be developed in such a way that the various procedures complement one another to provide a representative sample of indicators taught over a period.

## SUGGESTED TIME ALLOCATION

A total of ten periods a week, each period consisting of thirty minutes, is allocated to the teaching of mathematics at the Lower Primary level. It is recommended that the teaching periods be divided as follows:

- 2 periods per day (two 30-minute periods)

## **PEDAGOGICAL APPROACHES**

These include the approaches, methods, strategies, appropriate relevant teaching and learning resources for ensuring that every learner benefits from teaching and learning process. The curriculum emphasises the:

1. creation of learning-centred classrooms through the use of creative approaches to ensure learner empowerment and independent learning.
2. positioning of inclusion and equity at the centre of quality teaching and learning
3. use of differentiation and scaffolding as teaching and learning strategies for ensuring that no learner is left behind
4. use of Information Communications Technology (ICT) as a pedagogical tool
5. identification of subject specific instructional expectations needed for making learning in the subject relevant to learners
6. integration of assessment as learning, for learning and of learning into the teaching and learning processes and as an accountability strategy
7. questioning techniques that promote deep learning

## **LEARNING-CENTRED PEDAGOGY**

The learner is at the centre of learning. At the heart of the national curriculum for change and sustainable development is the learning progression and improvement of learning outcomes for Ghana's young people with a focus on the 4Rs – Reading, wRiting, aRithmetic and cReativity. It is expected that at each curriculum phase, learners would be offered the essential learning experiences to progress seamlessly to the next phase. Where there are indications that a learner is not sufficiently ready for the next phase a compensatory provision through differentiation should be provided to ensure that such a learner is ready to progress with his/her cohort. At the primary school, the progression phases are KG1 to KG2 and B1 to B6.

The Curriculum encourages the creation of a learning centred classroom with the opportunity for learners to engage in meaningful “hands-on” activities that bring home to the learner what they are learning in school and what they know from outside of school. The learning centred classroom is a place for the learners to discuss ideas through the inspiration of the teacher. The learners then become actively engaged in looking for answers, working in groups to solve problems. They also research for information, analyse and evaluate information. The aim of the learning-centred classroom is to enable learners take ownership of their learning. It provides the opportunity for deep and profound learning to take place.

The teacher as a facilitator needs to create a learning environment that:

1. makes learners feel safe and accepted
2. helps learners to interact with varied sources of information in a variety of ways
3. helps learners to identify a problem suitable for investigation through project work
4. connects the problem with the context of the learners' world so that it presents realistic opportunities for learning
5. organises the subject matter around the problem, not the subject
6. gives learners responsibility for defining their learning experience and planning to solve the problem
7. encourages learners to collaborate in learning

8. expects all learners to demonstrate the results of their learning through a product or performance

It is more productive for learners to find answers to their own questions rather than teachers providing the answers and their opinions in a learning-centred classroom.

## **INCLUSION**

Inclusion is ensuring access and learning for all learners especially those disadvantaged. All learners are entitled to a broad and balanced curriculum in every school in Ghana. The daily learning activities to which learners are exposed should ensure that the learners' right to equal access and accessibility to quality education is met. The Curriculum suggests a variety of approaches that addresses learners' diversity and their special needs in the learning process. When these approaches are effectively used in lessons, they will contribute to the full development of the learning potential of every learner. Learners have individual needs and learning experiences and different levels of motivation for learning. Planning, delivery and reflection on daily learning experiences should take these differences into consideration. The curriculum therefore promotes:

1. learning that is linked to the learner's background and to their prior experiences, interests, potential and capacities.
2. learning that is meaningful because it aligns with learners' ability (e.g. learning that is oriented towards developing general capabilities and solving the practical problems of everyday life); and
3. the active involvement of the learners in the selection and organisation of learning experiences, making them aware of their importance and also enabling them to assess their own learning outcomes.

## **DIFFERENTIATION AND SCAFFOLDING**

**Differentiation** is a process by which differences (learning styles, interest and readiness to learn) between learners are accommodated so that all learners in a group have best possible chance of learning. Differentiation could be by content, tasks, questions, outcome, groupings and support. Differentiation as a way of ensuring each learner benefits adequately from the delivery of the curriculum can be achieved in the classroom through i) Task ii) Support from the Guidance and Counselling Unit and iii) Learning outcomes.

**Differentiation by task** involves teachers setting different tasks for learners of different abilities. E.g. in sketching the plan and shape of their classroom some learners could be made to sketch with free hand while others would be made to trace the outline of the plan.

**Differentiation by support** involves the teacher giving needed support and referring weak learners to the Guidance and Counselling Unit for academic support.

**Differentiation by outcome** involves the teacher allowing learners to respond at different levels. Weaker learners are allowed more time for complicated tasks.

**Scaffolding** in education refers to the use of variety of instructional techniques aimed at moving learners progressively towards stronger understanding and ultimately greater independence in the learning process.

It involves breaking up the learning task, experience or concepts into smaller parts and then providing learners with the support they need to learn each part. The process may require a teacher assigning an excerpt of a longer text to learners to read and engaging them to discuss the excerpt to improve comprehension. The teacher goes ahead to guide them through the key words/vocabulary to ensure learners have developed a thorough understanding of the text before engaging them to read the full text.

Common scaffolding strategies available to the teacher are:

1. give learners a simplified version of a lesson, assignment, or reading, and then gradually increases the complexity, difficulty, or sophistication over time
2. describe or illustrate a concept, problem, or process in multiple ways to ensure understanding
3. give learners an exemplar or model of an assignment they will be asked to complete
4. give learners a vocabulary lesson before they read a difficult text
5. describe the purpose of a learning activity clearly and the learning goals they are expected to achieve
6. describe explicitly how the new lesson builds on the knowledge and skills learners were taught in a previous lesson

## **INFORMATION AND COMMUNICATION TECHNOLOGY**

Information and Communication Technology (ICT) has been integrated into the mathematics curriculum as part of the core of education, alongside reading, writing and numeracy. Thus, the curriculum is designed to use ICT as a teaching and learning tool to enhance deep and independent learning. For instance, the teacher in certain instances is directed to use multimedia to support the teaching and learning process.

ICT has the potential to innovate, accelerate, enrich, and deepen skills. It also motivates and engages learners to relate school experiences to work practices. It provides opportunities for learners to fit into the world of work. Some of the expected outcomes that this curriculum aims to achieve are:

1. improved teaching and learning processes
2. improved consistency and quality of teaching and learning
3. increased opportunities for more learner-centered pedagogical approaches
4. improved inclusive education practices.
5. improved collaboration, creativity, higher order thinking skills
6. enhanced flexibility and differentiated approach of delivery

The use of ICT as a teaching and learning tool is to provide learners an access to large quantities of information online and offline. It also provides the framework for analysing data to investigate patterns and relationships in the geographical context. Once learners have made their findings, ICT can help them organize, edit and print the information in many different ways.

Learners need to be exposed to various ICT tools around them including calculators, radios, cameras, phones, television sets and computers and related software like Microsoft Office packages - Word, PowerPoint and Excel as teaching and learning tools. The exposure that learners are given at the primary school level to use ICT in exploiting learning will build their confidence and will increase their level of motivation to apply ICT use in later years, both within and outside of education. ICT use for teaching and learning is expected to enhance the quality and competence level of learners.

## ORGANISATION AND STRUCTURE OF THE CURRICULUM

The curriculum is organised under key headings and annotations.

### ANNOTATION

A unique annotation is used to label the class, strands, sub-strands, content standards and learning indicators in the curriculum for the purpose of easy referencing. The annotation is defined in figure 1:

Figure 1: Curriculum Reference Numbers

**Strands** are the broad areas/sections of the mathematics content to be studied.

**Sub-strands** are the topics within each strand under which the content is organised.

**Content standard** refers to the pre-determined level of knowledge, skill and/or attitude that a learner attains by a set stage of education.

**Indicator** is a clear outcome or milestone that learners have to exhibit in each year to meet the content standard expectation. The indicators represent the minimum expected standard in a year.

**Exemplar** – support and guidance which clearly explains the expected outcomes of an indicator and suggests what teaching and learning activities could take to support the facilitators/teachers in the delivery of the curriculum.

## ORGANIZATION OF THE STANDARDS (B4 – B6)

The content standards in this document are organized by grade level. Within each grade level, the contents are grouped first by strands. Each strand is further subdivided into sub-strands of related indicators.

- **Indicators** are learning outcomes that define what learners should know and be able to do.
- **Content Standards** are groups of related indicators. Note that indicators from different standards may sometimes be closely related, because mathematics is a connected subject.
- **Sub-strands** are larger groups of related indicators (or mathematics topics to be studied). Indicators from different sub-strands may sometimes be closely related.
- **Strands** are the main branches of the mathematics content to be studied.

The Standards are organized at the KG1 – B6 phase under four strands:

1. Number
2. Algebra
3. Geometry and Measurement
4. Data

The table below shows the scope and sequence of the strands addressed at the B4 – B6 phase. The remaining part of the document presents the details of the standards and indicators for each grade level,

### STRUCTURE OF THE CURRICULUM

STRANDS	SUB-STRANDS		
	B4	B5	B6
Number (Counting, Representation, Cardinality and Operations)	Whole Numbers Counting and Representation	Whole Numbers Counting and Representation	Whole Numbers Counting and Representation

<p><b>B4.1.1.3</b>  <b>Demonstrate an understanding of factors, multiples and squared numbers</b></p>	<p><b>B4.1.1.3.1 Determine set of factors of a given numbers up to 50</b></p> <p>E.g. 1 Learners make formation of sets of equal object from a given quantity. For example with 12 straws  Learners make groupings such as:</p>  <p style="text-align: right;"><i>3 groups of 4</i> <math>\Rightarrow</math> 3, 4</p> <p style="text-align: right;"><i>4 groups of 3</i> <math>\Rightarrow</math> 4, 3</p> <p style="text-align: right;"><i>2 groups of 6</i> <math>\Rightarrow</math> 2, 6</p> <p>E.g. 2 Learners pair grouping and the number of equal objects for each formation as factors;</p> <table border="1" data-bbox="566 818 1503 975" style="width: 100%; border-collapse: collapse;"> <tr> <td style="padding: 5px;">4 groups of 3 straws (4, 3)</td> <td style="padding: 5px;">3 groups of 4 straws (3, 4)</td> </tr> <tr> <td style="padding: 5px;">6 groups of 2 straws (6, 2)</td> <td style="padding: 5px;">2 groups of 6 straws (2, 6)</td> </tr> <tr> <td style="padding: 5px;">1 group of 12 straws (1, 12)</td> <td style="padding: 5px;">12 groups of 1 straw (12, 1)</td> </tr> </table> <p>E.g. 3 Learners collect from the pairs and form a set as the factors of the given number. For example the set of factors of 12 = {1, 2, 3, 4, 6, 12}</p>	4 groups of 3 straws (4, 3)	3 groups of 4 straws (3, 4)	6 groups of 2 straws (6, 2)	2 groups of 6 straws (2, 6)	1 group of 12 straws (1, 12)	12 groups of 1 straw (12, 1)	<p>Learners develop:</p> <p>Problem Solving Skills; Critical Thinking; Justification of Ideas; Collaborative Learning; Attention to Precision; Look for Patterns and Relationships, Cultural Identity</p>
4 groups of 3 straws (4, 3)	3 groups of 4 straws (3, 4)							
6 groups of 2 straws (6, 2)	2 groups of 6 straws (2, 6)							
1 group of 12 straws (1, 12)	12 groups of 1 straw (12, 1)							

CONTENT STANDARDS	INDICATORS AND EXEMPLARS	SUBJECT SPECIFIC PRACTICES AND CORE COMPETENCIES
<p><b>B4.1.1.3</b>  <b>Demonstrate an understanding of factors, multiples and squared numbers</b>  <b>CONT'D</b></p>	<p><b>B4.1.1.3.2 Determine the highest common factor (HCF) of any two whole numbers between 1 and 50.</b></p> <p>E.g. 1 Learners list the factors of two or more given whole numbers; 12 and 24 to list the factors. That is:  <math>12 = \{1, 2, 3, 4, 6, 12\}</math> and <math>24 = \{1, 2, 3, 4, 6, 8, 12, 24\}</math></p> <p>Learners determine the set of the common factors E.g. The common set factors of 12 and 24 = <math>\{1, 2, 3, 4, 6, 12\}</math>. Learners select the highest common factor of 12 and 24 as 12</p> <p>E.g. 2 Learners may use Venn diagrams to find the common factors and then the highest common factor by placing the factors in the regions of the shapes. The highest common factor of 12 and 20, in the diagram is 4</p> <div style="text-align: center;">  </div> <p>Note: Do not introduce formal set theory and notation.  Numbers in the common regions of the two shapes.</p> <p><b>B4. 1.1.3.3. Determine the lowest common multiple (LCM) of at least any two given numbers up to 100.</b></p> <p>E.g. 1 Learners identify and the list the set multiples of given numbers using skip counting E.g. The set of multiples 5 = <math>\{ 5, 10 15.....100\}</math> and the etc. of multiples of 10 = <math>\{10, 20, 30 , .....100\}</math></p> <p>E.g. 2 Learners list the set of common multiples of any two or more given numbers between 0 and 100.  E.g. The set of common multiples of 5 and 10 = <math>\{10, 20, 30, \dots 100\}</math>. Learners select the least of the common multiple of the given numbers, and identify the least common multiple (LCM). The LCM of 5 and 10 is 10.</p>	<p>Learners develop:</p> <p>Problem Solving Skills;  Critical Thinking;  Justification of Ideas;  Collaborative Learning;  Attention to Precision</p>

CONTENT STANDARDS	INDICATORS AND EXEMPLARS	SUBJECT SPECIFIC PRACTICES AND CORE COMPETENCIES
<p><b>B4.1.1.3 Demonstrate an understanding of factors, multiples and squared numbers CONT'D</b></p>	<p><b>B4.1.1.3.4 Recognise the relationship between factors and multiples.</b></p> <p>E.g. 1 Factors represent the numbers that we can multiply to get a bigger number called the product or multiple. Since <math>12 = 4 \times 3</math>, we can say 4 and 3 are factors of 12; and 12 is a multiple of 3 or a multiple of 4. Break given multiples into factors and pairs of factors of given numbers.</p> <p>E.g. 2 Investigate even and odd numbers.</p> <p>E.g. 3 Investigate numbers that are multiples of 2, 3, 4 and 5. How do you know a number is a multiple of 2? a multiple of 3? a multiple of 4? and a multiple of 5? (This is also known as the divisibility test).</p> <p><b>B4.1.1.3.5 Generate and analyse patterns in square numbers</b></p> <p>E.g. 1 Put learners into convenient groups and provide each group adequate number of bottle tops, an A4 sheet and a 30cm ruler and ask them to generate square numbers by continuing the arrangement shown below up to the 10<sup>th</sup> number; [i.e. 1, 4, 9, 16, 25, 36 ... )</p> <div style="text-align: center;">  </div> <div style="text-align: center; margin-top: 20px;">  </div>	<p>Learners develop:</p> <p>Problem Solving Skills; Critical Thinking; Justification of Ideas; Collaborative Learning; Attention to Precision; Look for Patterns and Relationships</p>

**B4.1.1.3**  
**Demonstrate an understanding of factors, multiples and squared numbers**  
**CONT'D**

E.g. 2 Investigate the relationship between square numbers and the sum of consecutive odd numbers.

$$\begin{array}{l} 1 \longrightarrow 1^2 = 1 \\ 1+3=4 \longrightarrow 2^2 = 4 \\ 1+3+5=9 \longrightarrow 3^2 = 9 \\ 1+3+5+7=16 \longrightarrow 4^2 = 16 \end{array}$$

**B4.1.1.3.6 Represent square numbers using factors**

E.g. 1 Learners draw a square whose side is 1 unit by 1 unit and determine the area; repeat the activity for a 2 unit, 3 unit and 4 unit squares.

E.g. 2 Learners work in groups to continue the pattern to include the factors of 144.

(Key Concept: when a number has

been multiplied by itself we say the answer is a square number hence  $1 \times 1 = 1$ ;  $2 \times 2 = 4$ ;  $3 \times 3 = 9$  and we can write three squared as  $3 \times 3 = 3^2$ )

	Area = $1 \times 1 = 1^2 = 1$
	Area = $2 \times 2 = 2^2 = 4$
	Area = $3 \times 3 = 3^2 = 9$
	Area = $4 \times 4 = 4^2 = 16$

Learners develop:

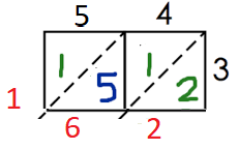

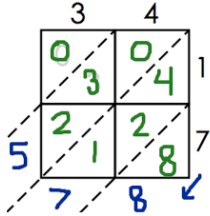

Problem Solving Skills;  
 Critical Thinking;  
 Justification of Ideas;  
 Collaborative Learning;  
 Attention to Precision; Look for Patterns and Relationships; Cultural Identity

<p><b>B4.1.2.6</b> <b>Translate and solve word problems involving the four basic operations on whole numbers</b></p>	<p>E.g. 2. Division using the estimation of multiples of 10, 100 and others of the divisor. For Example to solve <math>276 \div 3 = ?</math></p> <p>Learners use estimations: (they may have to use multiples of divisor to select a convenient estimate) “About how many groups of 3 can fit into 276?” The estimation used here is 40. So <math>3 \times 40 = 120</math>.</p> <p>Subtracting 120 from 276 to get 156. The next estimation used is 50. So <math>3 \times 50 = 150</math>. Subtracting 150 from 156 to get 6. The next estimation used is 2. And <math>2 \times 3 = 6</math>. Subtracting 6 from 6 to get 0. There is nothing more to share. To find the final answer add the estimations: <math>40 + 50 + 2 = 92</math>. Therefore <math>276 \div 3 = 92</math></p> <div style="text-align: center;">  </div> <p>Note: This strategy is nicknamed the “Big 7” because the division box looks like a 7.</p> <p><b>B4.1.2.6.1 Solve multi-step word problems involving the four basic operations</b></p> <p>E.g. 1. Learners model mathematical statements from a given word problem involving addition and multiplication and solve using the strategies learnt</p> <p>E.g. 2. Learners model mathematical statements from a given word problem involving division and subtraction and solve using the strategies learnt</p> <p>E.g. 3. Learners role play a given word problem involving addition and multiplication and solve</p> <p>E.g. 4. Learners role play a given word problem involving subtraction and division and solve</p> <p>E.g. 5. Learners model mathematical statements from a given word problem involving division and multiplication and solve using the strategies learnt The relationship between operations and the use of calculator and spreadsheet to assess the reasonableness of answers should be stressed</p>	<p>Learners develop:</p> <p>Problem Solving Skills; Critical Thinking; Justification of Ideas; Collaborative Learning;</p>

<b>CONTENT STANDARDS</b>	<b>INDICATORS AND EXEMPLARS</b>	<b>SUBJECT SPECIFIC PRACTICES AND CORE COMPETENCIES</b>
<p><b>B4.3.2.1</b>  <b>Describe the position of objects in space using the cardinal points</b></p>	<p><b>B4.3.2.1.1 Tell the position and motion of objects in space using the cardinal points north, south, east and west</b></p> <p>E.g. 1. Put pupils in convenient groups a give each group with a worksheet on graph with different labelled coordinates; some with axes labelled and other not etc. Pupils discuss their worksheets in their groups, then with whole class, describing coordinates, axes and pointing out errors on graphs if any</p> <p>E.g. 2. Pupils describe the position and motion of objects: e.g. The point <b>P</b> is to the west of point <b>T</b> but to the north of the <b>A</b></p> <div data-bbox="936 767 1361 1193" data-label="Figure"> </div> <p>E.g. 3. Ask learners to locate the coordinates (i.e. ordered pairs of the location) of the Points; e.g. B is (2,-3) and T is (2,2)</p>	<p>Learners develop:</p> <p>Problem Solving Skills; Critical Thinking; Justification of Ideas; Collaborative Learning; Personal Development and Leadership Attention to Precision</p>

**Sub-strand 3: Measurement- (Perimeter and Area)**

CONTENT STANDARDS	INDICATORS AND EXEMPLARS	SUBJECT SPECIFIC PRACTICES AND CORE COMPETENCIES
<p><b>B4.3.3.1</b></p> <p><b>Demonstrate understanding of perimeter of regular and irregular shapes</b></p>	<p><b>B4.3.3.1.1 Estimate perimeter using referents for centimetre or metre</b></p> <p>E.g. 1 Using pupils' referents for centimetre or metre estimate and calculate perimeter of any object in the classroom (e.g. exercise book, floor tiles, math set, etc.) then measure with a ruler of tape and calculate the actual perimeter and compare the answers</p>  <p><b>B4.3.3.1.2 Measure and record perimeter for regular and irregular shapes in cm and m.</b></p> <p>E.g. 1 Ask pupils to use a ruler to measure all the sides of a regular shape and sum up the result to obtain the perimeter</p>  <p><math>P = 16\text{cm}</math></p> <p align="center"><u>Find the Perimeter</u></p>  <p>length = 5cm width = 3cm</p> <p><math>P = 5\text{cm} + 3\text{cm} + 5\text{cm} + 3\text{cm} = 16\text{cm}</math></p> <p>Formula: <math>P = 2l + 2w</math>  <math>P = 2(5\text{cm}) + 2(3\text{cm})</math>  <math>P = 10\text{cm} + 6\text{cm}</math></p> <p>E.g. 2 Pupils to explore the area of irregular cut-out shapes using graph sheets. Pupils to trace the shape on the graph sheet and count out the unit squares</p>	<p>Learners develop:</p> <p>Problem Solving Skills; Critical Thinking; Justification of Ideas; Collaborative Learning; Personal Development and Leadership Attention to Precision; Cultural Identity</p>

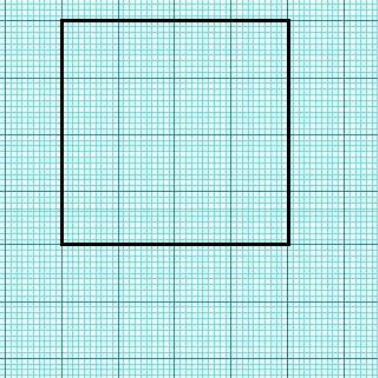

CONTENT STANDARDS	INDICATORS AND EXEMPLARS	SUBJECT SPECIFIC PRACTICES AND CORE COMPETENCIES
<p><b>B4.3.3.1</b>  <b>Demonstrate understanding of perimeter of regular and irregular shapes</b>  <b>CONT'D</b></p>	<p>Eg. 3 Given an irregular shape with its sizes, ask pupils to sum up the sizes to obtain the perimeter.</p>   <p><b>B4.3.3.1.3 Develop and apply a formula for determining perimeter of square and rectangle</b></p> <p>Eg. 1. Use cut out shapes to demonstrate how to determine the perimeter of 2-D shapes. Ask pupils to measure the sides of the cut out shape and add the results to obtain the perimeter</p>  <p>Eg. 2 Given a rectangular cut out shape, ask pupils to measure the sides of the shape and determine the perimeter of the shape</p>  <p>Therefore the perimeter of the triangle given is  <math>AB + AD + BC + CD</math>. Thus <math>4\text{cm} + 2\text{cm} + 4\text{cm} + 2\text{cm} = 12\text{cm}</math></p>	<p>Learners develop:</p> <p>Problem Solving Skills; Critical Thinking; Justification of Ideas; Collaborative Learning; Personal Development and Leadership  Attention to Precision: Patterns and Relationships</p>

CONTENT STANDARDS	INDICATORS AND EXEMPLARS	SUBJECT SPECIFIC PRACTICES AND CORE COMPETENCIES
<b>B4.3.3.1</b> Demonstrate understanding of perimeter of regular and irregular shapes <b>CONT'D</b>	<b>B4.3.3.1.4 Construct different rectangles for a given perimeter (cm, m) to demonstrate that many shapes are possible for a perimeter.</b>  E.g. 1. Given a perimeter of say 36cm, pupils to draw about three different rectangular shapes for the same perimeter. Combinations may include (6cm, 6cm, 12cm, 12cm; 8cm, 8cm, 10cm, 10cm; 4cm, 4cm, 14cm, 14cm, etc.)	Learners develop:  Problem Solving Skills; Critical Thinking; Justification of Ideas; Personal Development and Leadership Attention to Precision
<b>B4.3.3.2</b> Demonstrate an understanding of area of regular and irregular 2-D shapes	<b>B4.3.3.2.1 Recognise that area is measured in square units.</b>  E.g. 1 Pupils to explore the area of their exercise books. i.e. ask pupils to cut 1 cm by 1 cm square sheets and tack them on the back of their exercise books until it is covered entirely. Then, count the number of the sheets to obtain the area  E.g. 2. Pupils to explore the area of graph sheet. Ask pupils to calculate the area of one of the squares on the graph sheet. Then, count the number of squares on the graph sheet to obtain the area of the entire sheet  E.g. 3 Using floor tiles, ask pupils to measure the area of one of the tiles, then multiply it by the number of tiles to obtain the area of the entire room  Note: Help pupils to come out with the understanding that the area of a figure is the number of squares required to cover it completely  <b>B4.3.3.2.2 Select and justify referents for the units cm<sup>2</sup> or m<sup>2</sup></b>  E.g. 1 Let pupils explore the area of smaller objects say their exercise books. Then explore the area of larger objects say the entire classroom and compare the results for the two activities.  Ask pupils to tell which unit (cm <sup>2</sup> or m <sup>2</sup> ) they will use for which activity and why?	Learners develop:  Problem Solving Skills; Critical Thinking; Justification of Ideas; Collaborative learning; Personal Development and Leadership Attention to Precision

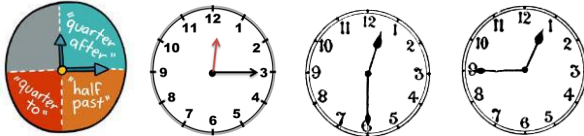

Area of graph sheet = 9cm<sup>2</sup>

CONTENT STANDARDS	INDICATORS AND EXEMPLARS	SUBJECT SPECIFIC PRACTICES AND CORE COMPETENCIES
<p><b>B4.3.3.2</b></p> <p><b>Demonstrate understanding of area of regular and irregular 2-D shapes</b> <b>CONT'D</b></p>	<p><b>B4.3.3.2.3 Estimate area by using referents for <math>\text{cm}^2</math> or <math>\text{m}^2</math></b></p> <p>E.g. 1 Let pupils estimate the area of items in the classroom. Then measure the actual area and compare with their estimates</p> <p>E.g. 2 Pupils to measure the area of say their exercise books. With that as a reference point, ask them to estimate the area of the teacher's table</p> <p><b>B4.3.3.2.4 Develop and apply a formula for determining area of a rectangle and square</b></p> <p>E.g. 1 Give pupils a standard graph sheet with 1 cm squares and ask them to draw a square of given length on the graph sheet. The area can be measured by counting the number of square units. So, we can count the number of unit units to find the area. In the diagram the area is <math>16\text{cm}^2</math> since there are 36 squares in the shape</p> <p>E.g. 2 Ask pupils to count the number of cubic squares on the vertical section of the shape and multiply it by the number on the horizontal section</p> <p>Ask pupils to compare their answer with the first strategy and draw their own conclusions. The area of a square can be given as <math>L \times L</math> and that of a rectangle is <math>L \times B</math>.</p> <p><b>B4.3.3.2.5 Construct different rectangles for a given area (<math>\text{cm}^2</math> or <math>\text{m}^2</math>) in order to demonstrate that many different rectangles may have the same area.</b></p> <p>E.g. 1. Given an area of say <math>24\text{cm}^2</math>, pupils should draw about three different rectangles for the same area. Combinations may include (<math>6\text{cm} \times 4\text{cm}</math>; <math>8\text{cm} \times 3\text{cm}</math>; <math>12\text{cm} \times 2\text{cm}</math>, etc.)</p> 	<p>Learners develop:</p> <p>Problem Solving Skills; Critical Thinking; Justification of Ideas; Collaborative Learning; Personal Development and Leadership Attention to Precision</p>

**BASIC 5**  
**Strand I- Number**  
**Sub-strand I: Counting, Representation & Cardinality**

CONTENT STANDARDS	INDICATORS AND EXEMPLARS	SUBJECT SPECIFIC PRACTICES AND CORE COMPETENCIES
<p><b>B5.1.1.1</b></p> <p><b>Demonstrate an understanding of quantities and place value for multi-digit numerals up to 100,000</b></p>	<p><b>B5.1.1.1.1 Model number quantities up to 1,000,000 using graph sheets and multi-base block</b></p> <p>E.g. 1. Ask pupils to model number quantities up to 1000,000 using graph sheets or multi-base materials. For instance, with multi-base block, a cube = 1000 unit; a rod = 10,000; a flat = 100,000 and a block = 1,000,000; learners model 436,000 with the appropriate materials</p> <p>E.g. 2. Ask pupils to model the number 137,000 shading graph sheet square as shown below, where 1 cm×1 cm square represents 1000 units .</p> 	<p>Learners develop:</p> <p>Problem Solving Skills; Critical Thinking; Justification of Ideas; Collaborative Learning; Personal Development and Leadership Attention to Precision</p>

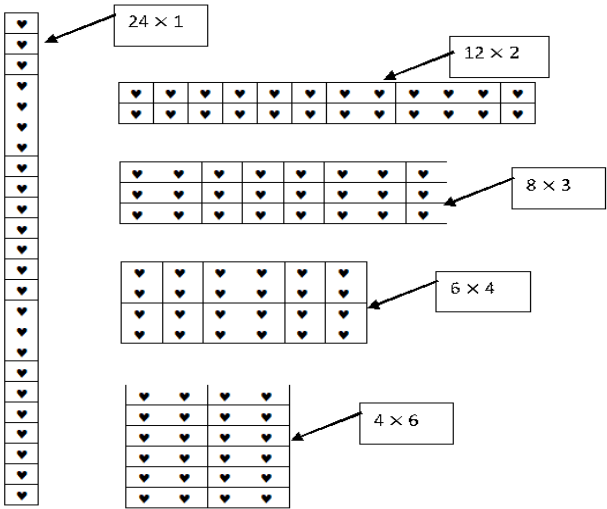

CONTENT STANDARDS	INDICATORS AND EXEMPLARS	SUBJECT SPECIFIC PRACTICES AND CORE COMPETENCIES														
<p><b>B5.1.1.1</b></p> <p><b>Demonstrate an understanding of quantities and place value for multi-digit numerals up to 1000,000. CONT'D</b></p>	<p>E.g.3. Give learners teacher-made token currency notes [¢10, ¢100 &amp; ¢500 notes] on different coloured-paper and ask them to work out how many will be required to model given amounts up to ¢10,000; e.g. ¢23,480</p> <p><b>B5.1.1.1.2 Read and write numbers in figures and in words up to 1000,000</b></p> <p>E.g. 1 Play the place value number wheel game: Use the million number wheel to generate 7-digit numbers and represent the number generated on a place value frame. Throw a number of pebbles (or stones) onto the number wheel, identify the number of pebbles landing in each place value ring, and state the number generated in the wheel (i.e. 2 landed in the ten-thousands' ring making the number twenty-thousand or 20,000)</p> <div style="text-align: center;">  <p>Place value number wheel</p> </div> <div style="text-align: center;"> <p>Place value chart</p> <table border="1" data-bbox="1070 718 1579 981"> <thead> <tr> <th>Million</th> <th>Hundred-thousands</th> <th>Ten-thousands</th> <th>Thousand</th> <th>Hundreds</th> <th>Tens</th> <th>Ones</th> </tr> </thead> <tbody> <tr> <td>2</td> <td>5</td> <td>2</td> <td>4</td> <td>5</td> <td>1</td> <td>3</td> </tr> </tbody> </table> </div> <div style="text-align: right; margin-top: 20px;">  </div> <p>E.g. 2. Ask pupils to write given numbers on the expanded form of the number : 2,524,513 = 1000,000 × 2 + 100,000 × 5 + 10,000 × 2 + 1000 × 4 + 100 × 5 + 10 × 1 + 1 × 3 = 2,000,000 + 500,000 + 20,000 + 4,000 + 500 + 10 + 3</p>	Million	Hundred-thousands	Ten-thousands	Thousand	Hundreds	Tens	Ones	2	5	2	4	5	1	3	<p>Learners develop:</p> <p>Problem Solving Skills; Critical Thinking; Justification of Ideas; Collaborative Learning; Personal Development and Leadership Attention to Precision, Cultural Identity</p>

CONTENT STANDARDS	INDICATORS AND EXEMPLARS	SUBJECT SPECIFIC PRACTICES AND CORE COMPETENCIES																
<p><b>B5.1.1.1</b>  <b>Demonstrate an understanding of quantities and place value for multi-digit numerals up to 100,000. CONT'D</b></p>	<p>E.g. 3 Give two numbers between 10,000 and 100,000 to each group and encourage learners to say as many things as possible about the two numbers. For instance 1022345 and 1022534; 1022345 is less than (smaller than) than 1022534 or 1022534 is bigger than (greater than) 1022345, or 1022345 is almost 200 less than 1022534 etc</p> <p><b>B5.1.1.1.5 Round (off, up, down) whole numbers up to 100,000 to the nearest ten thousands, thousands, hundreds and tens</b></p> <p>E.g. 1 Learners round off numbers to the nearest 10,000, 1000 and 100. For instance; 129,500 is approximately 130,000 and 19100 as approximately 19,000</p> <p>E.g. 2 Learners round up and round down to estimate sums and differences</p> <p>NB: To round down learners consider the smaller of the two approximated numbers, while round up considers the bigger of the two numbers. The table below may bring the meaning of these two concepts clearer</p> <table border="1" data-bbox="586 954 1449 1099"> <thead> <tr> <th>214765</th> <th>Round up</th> <th>Round down</th> <th>Round off</th> </tr> </thead> <tbody> <tr> <td>to the nearest ten</td> <td>214770</td> <td>214760</td> <td>214770</td> </tr> <tr> <td>to the nearest hundred</td> <td>214800</td> <td>214700</td> <td>214800</td> </tr> <tr> <td>to the nearest thousand</td> <td>215000</td> <td>214000</td> <td>215000</td> </tr> </tbody> </table>	214765	Round up	Round down	Round off	to the nearest ten	214770	214760	214770	to the nearest hundred	214800	214700	214800	to the nearest thousand	215000	214000	215000	<p>Learners develop:</p> <p>Problem Solving Skills; Critical Thinking; Justification of Ideas; Collaborative Learning; Personal Development and Leadership Attention to Precision, Cultural Identity</p>
214765	Round up	Round down	Round off															
to the nearest ten	214770	214760	214770															
to the nearest hundred	214800	214700	214800															
to the nearest thousand	215000	214000	215000															

CONTENT STANDARDS	INDICATORS AND EXEMPLARS	SUBJECT SPECIFIC PRACTICES AND CORE COMPETENCIES
<p><b>B5.1.1.1</b> <b>Demonstrate an understanding of quantities and place value for multi-digit numerals up to 1,000,000.</b></p>	<p><b>B5.1.1.1.6 Skip count forwards and backwards in 500s 1000s etc. up to and from 100,000</b>  E.g. 1 Put learners into convenient groups. A learner mention a number and another makes skip count in 500s or 1000s to include the fifth count. For instance.  Learner 1: Shout out “15290”<i>skip counting up in 500s</i>  Learner 2: 15790, 16290, 17290, 17790, 18290, etc.  Learner 3; Shout out “31285”<i>skip counting up in 1000s</i>  Learner 4; 32285, 33285, 34285, 35285, 36285....etc.  E.g. 2 Skip count forwards and backwards by 50s and between 1000 and 10000 that are multiples of 50s and 100s but make an error or leave out a number. Challenge learners to identify or correct error.</p>	<p>Learners develop:</p> <p>Problem Solving Skills; Critical Thinking; Justification of Ideas; Collaborative Learning; Personal Development and Leadership Attention to Precision, Cultural Identity</p>
<p><b>B5.1.1.2</b> <b>Demonstrate understanding of Roman Numerals up to C (i.e. 100)</b></p>	<p><b>B5.1.1.2.1 Recognize Roman Numerals system up to C (i.e. 100)</b>  E.g. 1 Display roman numeral charts (1-100) arranged in sequential order and lead learners to identify the numerals. Learners identify the main characters of the roman numerals used to build the table up to 30 i.e. I, II, III, IV, V, X, L and C  Call out a numeral and have learners point at it from the chart  E.g. 2 Have learners match the Roman numerals to the Hindu-Arabic numerals for instance I = 1; V= 5; IX= 9, XV= 15, XXX = 30, XL = 40, LVI = 56, XCIX = 99. Mention some numerals randomly and have learners point at it on the chart.  <b>B5.1.1.2.2 Count and convert Hindu Arabic numbers to Roman numerals up to 100 (C) and vice versa</b>  E.g. 1 Learners read the chart sequentially forwards and backwards, vertically (up and down), zig-zag, diagonally and randomly without pointing to the numbers. Invite 2-3 learners to read to the class. Call a Roman numeral and ask learners to write  E.g. 2 Give learners a numeral in the Hindu Arabic system and have learners convert to roman numeration and vice versa for instance XXIV = 24, LX = 60, XCIV = 94, ETC.</p>	<p>Learners develop:</p> <p>Problem Solving Skills; Critical Thinking; Justification of Ideas; Collaborative Learning; Personal Development and Leadership Attention to Precision, Cultural Identity</p>

CONTENT STANDARDS	INDICATORS AND EXEMPLARS	SUBJECT SPECIFIC PRACTICES AND CORE COMPETENCIES
<p><b>B5.1.1.3</b></p> <p><b>Demonstrate an understanding of factors, multiples of numbers including composite, even, odd and prime numbers from 1 to 100</b></p>	<p><b>B5.1.1.3.1 Identify the factors of whole numbers 1 - 100</b></p> <p>E.g. 1 Ask learners to use different arrangements of arrays of objects to find factors of whole numbers 1 – 100. For instance the factors of 24 can be obtained from the following arrays of objects.</p> <p>E.g. 2 Ask learner to collect from the arrays, pairs of number as the factors of the given number, 24. Hence the set of factors of <math>24 = \{1, 2, 3, 4, 6, 8, 12, 24\}</math></p> 	<p>Learners develop:</p> <p>Problem Solving Skills; Critical Thinking; Justification of Ideas; Collaborative Learning; Personal Development and Leadership Attention to Precision, Cultural Identity</p>

<p><b>B5.1.2.3</b></p> <p><b>Recall basic division fact up to 100</b></p>	<p><b>B5. 1.2.3.1 Determine basic division fact up to 81</b></p> <p>E.g. 1. Investigate numbers that are multiples of 3,4, 6, 8 and 9. How do you know a number is divisible by 3, 4, 6, 9? (This is also known as the divisibility test).</p> <p>E.g. 2. Draw a 6 by 6 multiplication chart and use it as a game board to play the 3-in-a-line game with a pair of dice or playing cards. Players take turns in throwing a one dice and mark (or cover) a number that can be divided by the results (i.e. a quotient). The winner is the one who obtains three numbers in a line.</p> <div style="display: flex; justify-content: space-around; align-items: center;"> <div data-bbox="551 874 763 1015" style="text-align: center;">  </div> <div data-bbox="976 879 1106 1011" style="text-align: center;">  </div> <div data-bbox="1234 837 1615 1082" style="text-align: center;"> <table border="1"> <thead> <tr> <th></th> <th>5</th> <th>6</th> <th>7</th> <th>8</th> <th>9</th> <th>10</th> </tr> </thead> <tbody> <tr> <th>5</th> <td>10</td> <td>15</td> <td>20</td> <td>25</td> <td>30</td> <td>35</td> </tr> <tr> <th>6</th> <td>12</td> <td>18</td> <td>24</td> <td>30</td> <td>36</td> <td>42</td> </tr> <tr> <th>7</th> <td>14</td> <td>21</td> <td>28</td> <td>35</td> <td>42</td> <td>49</td> </tr> <tr> <th>8</th> <td>16</td> <td>24</td> <td>32</td> <td>40</td> <td>48</td> <td>56</td> </tr> <tr> <th>9</th> <td>18</td> <td>27</td> <td>36</td> <td>45</td> <td>54</td> <td>63</td> </tr> <tr> <th>10</th> <td>20</td> <td>30</td> <td>40</td> <td>50</td> <td>60</td> <td>70</td> </tr> </tbody> </table> </div> </div>		5	6	7	8	9	10	5	10	15	20	25	30	35	6	12	18	24	30	36	42	7	14	21	28	35	42	49	8	16	24	32	40	48	56	9	18	27	36	45	54	63	10	20	30	40	50	60	70	<p>Learners develop:</p> <p>Problem Solving Skills; Critical Thinking; Justification of Ideas; Collaborative Learning; Personal Development and Leadership Attention to Precision</p>

<p><b>B5.4.1.1</b></p> <p><b>Differentiate between first-hand and second-hand data</b></p>	<p><b>B5.4.1.1.1 Explain the difference between first-hand and second-hand data.</b></p> <p>E.g. 1. Explain first-hand data as data that you collect on your own; and second-hand data is data that has been collected and organized by somebody else.</p> <p>E.g. 2. Mrs. Acquaye’s class studied the weather. The learners measured the rainfall for 5 days (Monday to Friday). For her class these results are <b>first-hand data</b>. But for another class these results are <b>second-hand data</b>.</p> <p><b>B5.4.1.1.2 Find examples of second-hand data in print and electronic media, such as newspapers, magazines, and the internet.</b></p> <p>E.g. 1. Look for examples of second-hand data in the newspaper or website; You can find data on league table, price list, sales, rainfall, etc.</p> <p>E.g. 2. Ask learners to study the second-hand data on the league table and write questions for their friends to read and interpret the data. E.g. Which team has not lost in a match? Which team has won only one match?</p> <table border="1" style="margin-left: auto; margin-right: auto;"> <thead> <tr> <th>Team</th> <th>P</th> <th>W</th> <th>D</th> <th>L</th> <th>F</th> <th>A</th> <th>Pts</th> </tr> </thead> <tbody> <tr> <td>Hearts</td> <td>2</td> <td>2</td> <td>0</td> <td>0</td> <td>4</td> <td>1</td> <td>6</td> </tr> <tr> <td>Kotoko</td> <td>2</td> <td>1</td> <td>0</td> <td>1</td> <td>3</td> <td>3</td> <td>3</td> </tr> <tr> <td>Dwafts</td> <td>2</td> <td>0</td> <td>1</td> <td>1</td> <td>0</td> <td>1</td> <td>1</td> </tr> <tr> <td>Gold Feilds</td> <td>2</td> <td>0</td> <td>1</td> <td>1</td> <td>0</td> <td>2</td> <td>1</td> </tr> </tbody> </table>	Team	P	W	D	L	F	A	Pts	Hearts	2	2	0	0	4	1	6	Kotoko	2	1	0	1	3	3	3	Dwafts	2	0	1	1	0	1	1	Gold Feilds	2	0	1	1	0	2	1	<p>Learners develop:</p> <p>Problem Solving Skills;            Critical Thinking; Justification of Ideas; Collaborative Learning; Personal Development and Leadership            Attention to Precision</p>

Solve word problems; e.g. (i) Some number added to 5 is equal to -11. Find the number. (ii) Ben and Cam are diving. Ben is 15.8 meters below the surface of the water. Cam is 4.2 meters above Ben. What is Cam's position relative to the surface of the water?</p>	<p>Learners develop:</p> <p>Problem Solving Skills;  Critical Thinking; Justification of Ideas; Collaborative learning; Personal Development and Leadership;  Attention to Precision</p>

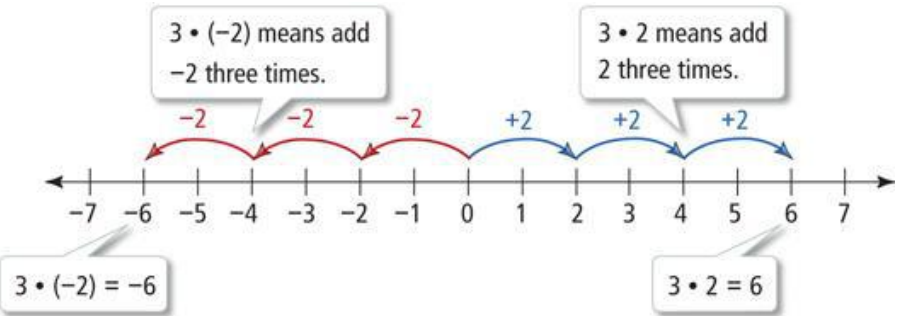

CONTENT STANDARD	INDICATORS AND EXEMPLARS	SUBJECT SPECIFIC PRACTICES AND CORE COMPETENCIES
<p><b>B6.1.2.6</b>  <b>Demonstrate an understanding of integers</b>  <b>CONT'D</b></p>	<p><b>B6.1.1.4.3 Perform simple multiplication with integers</b></p> <p>E.g. 1. Use number line to help learners to multiply integers; learners should always start from zero and skip/hop to the left or write on the number line. For instance, to multiply 3 by (-2), have learners start from zero and hop to the left 3 times in an interval of 2.</p> 	<p>Learners develop:</p> <p>Problem Solving Skills;  Critical Thinking; Justification of Ideas; Collaborative Learning; Personal Development and Leadership  Attention to Precision</p>

### Sub-Strand 3: Fractions

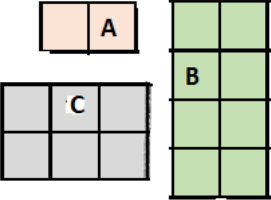

Content Standard	Indicators and EXEMPLARS	SUBJECT SPECIFIC PRACTICES AND Core Competencies
<p><b>B6.1.3.1</b>  <b>Demonstrate an understanding of strategies for comparing, adding, subtracting, multiplying and dividing common, decimal and percent fractions</b></p>	<p><b>B6.1.3.1.1 Compare and order a mixture of fractions: common, percent and decimal fractions (up to thousandths)</b></p> <p>E.g. 1. To compare and order a mixture of common, decimal and percent fractions, express them in one form (i.e. either common, decimal or percent); e.g. to order <math>0.758</math>, <math>\frac{5}{8}</math> and <math>73\%</math>; we have <math>\rightarrow \frac{5}{8} = \frac{625}{1000} = 62.5\%</math>, <math>0.758 = \frac{758}{1000} = 75.8\%</math>, and <math>73\% = \frac{73}{100} = 0.73</math>, Hence the order from least to the largest is <math>\frac{5}{8}</math>, <math>73\%</math> and <math>0.758</math></p> <p>E.g. 2. To compare and order a mixture of common, decimal and percent fractions you can locate the fractions on the number and order them</p> <div style="text-align: center;">  </div>	

CONTENT STANDARD	INDICATORS AND EXEMPLARS	SUBJECT SPECIFIC PRACTICES AND CORE COMPETENCIES
<p><b>B6.1.3.1</b></p> <p><b>Demonstrate understanding of strategies for comparing, adding, subtracting, multiplying and dividing common, decimal and percent fractions. CONT'D</b></p>	<p><b>B6.1.3.1.2 Add and subtract unlike and mixed fractions</b></p> <p>E.g. 1. To add like mixed fractions that are larger than 1, i.e. <math>2 \frac{1}{3}</math> and <math>3\frac{2}{3}</math> we write down the sum of the whole numbers and add the fractions; i.e. <math>2 \frac{1}{3} + 3\frac{2}{3} = 5 + \frac{1}{3} + \frac{2}{3} = 5 + \frac{(1+2)}{3} = 5\frac{3}{3} = 6</math>.</p> <p>E.g. 2. To subtract like-fractions that are larger than 1, i.e. <math>2 \frac{1}{3}</math> and <math>3\frac{2}{3}</math>, we change the mixed fractions into improper fractions and subtract;</p> <p>i.e. <math>3\frac{2}{3} - 2 \frac{1}{3} = \frac{11}{3} - \frac{7}{3} = \frac{(11-7)}{3} = \frac{4}{3} = 1 \frac{1}{3}</math></p> <p>E.g. 3. To add or subtract improper fractions with different denominators, (<math>2 \frac{1}{3}</math> and <math>3\frac{2}{5}</math>) we need find the Lowest Common Denominator (LCD) and use this to express the equivalent fractions. The LCD is 15 and the equivalent fractions are <math>2 \frac{5}{15}</math> and <math>3 \frac{6}{15}</math>; their sum is <math>2 \frac{1}{3} + 3\frac{2}{5} = 2 \frac{5}{15} + 3 \frac{6}{15} = 5 \frac{(5+6)}{15}</math> which is <math>5 \frac{11}{15}</math>; and difference <math>3\frac{2}{5} - 2 \frac{1}{3} = 1 \frac{(6-5)}{15} = 1 \frac{1}{15}</math></p>	<p>Learners develop:</p> <p>Problem Solving Skills; Critical Thinking; Justification of Ideas; Collaborative Learning; Personal Development and Leadership Attention to Precision</p>

CONTENT STANDARD	INDICATORS AND EXEMPLARS	SUBJECT SPECIFIC PRACTICES AND CORE COMPETENCIES
<p><b>B6.1.3.1</b>  <b>Demonstrate understanding of strategies for comparing, adding, subtracting, multiplying and dividing common, decimal and percent fractions. CONT'D</b></p>	<p><b>B6.1.3.1.3 Use models to explain the result of multiplying a fraction by whole number, a whole number by a fraction and a fraction by fraction</b></p> <p>E.g. 1. To multiply a whole number by a mixed fraction (e.g. <math>3 \times 2 \frac{2}{3}</math>) one can multiply the whole number by the whole number and then whole number by the fraction and add the products or change the mixed fraction to improper fraction and multiply;</p> <p>i.e. <math>3 \times 2 \frac{2}{3} = (3 \times 2) + 3 \times \frac{2}{3} = 6 + \frac{2}{3} + \frac{2}{3} + \frac{2}{3} = \frac{66}{3} = 8</math> or</p> <p><math>3 \times 2 \frac{2}{3} = 2 \frac{2}{3} + 2 \frac{2}{3} + 2 \frac{2}{3} = 6 \frac{(2+2+2)}{3} = \frac{66}{3} = 8</math></p> <p>E.g. 2. To multiply a fraction by a whole number the multiplication is interpreted as “of”; e.g. <math>\frac{2}{3} \times 5</math> means shade <math>\frac{2}{3}</math> of 5 ; i.e. finding two-thirds of each of five objects; i.e. <math>\frac{2}{3} \times 5</math> is <math>\frac{2}{3}</math> of 5 quantities, which leads 10 thirds, i.e. <math>\frac{2}{3} \times 5 = 10(\frac{1}{3}) = \frac{10}{3} = 3 \frac{1}{3}</math></p> <p>E.g. 3. To multiply a fraction (i.e. common or mixed) by a whole number (e.g. <math>4 \frac{2}{5} \times 5</math>) first change all into common fractions, then multiply the numerators separately and multiply the denominators separately and simplify, i.e. <math>4 \frac{2}{5} \times 5 = \frac{24}{5} \times \frac{5}{1} = \frac{(24 \times 5)}{5} = \frac{120}{5} = 24/1 = 24</math>. [Note, the product can be simplified before multiplying the numerators separately and multiplying the denominators separately].</p>	<p>Learners develop:</p> <p>Problem Solving Skills;  Critical Thinking; Justification of Ideas; Collaborative Learning; Personal Development and Leadership  Attention to Precision</p>

### Sub-Strand 4: Ratios and Proportion

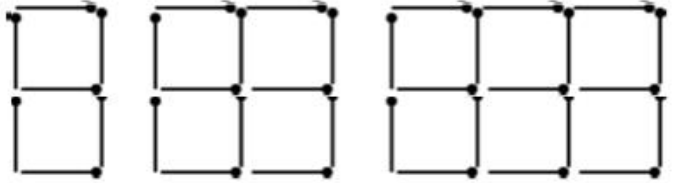

CONTENT STANDARD	INDICATORS AND EXEMPLARS	SUBJECT SPECIFIC PRACTICES AND CORE COMPETENCIES
<p><b>B6.1.4.1</b>  <b>Demonstrate understanding of the concept of ratios and its relationship to fractions and to the multiplication and division of whole numbers</b></p>	<p><b>B6.1.4.1.1 Use concrete models and pictorial representations to explain a ratio as a concept that shows the number of times one quantity can be obtained in another and write this symbolically and in its simplest form</b></p> <p>E.g. 1. Use concrete objects and/or pictorial representations to explain <b>ratio</b> as a number which tells the number of times a quantity can be obtained in another. In the figures, the area of the shape A is <math>\frac{1}{4}</math> of the area of the shape B; so they are in the <b>ratio 1:4</b>. Shape C is three times the size of A so the ratio of C to A is 3:1.</p> <div style="display: flex; align-items: center; justify-content: center;">  <div style="margin-left: 20px;"> <p>of the area of the Shape C is three times the size of A so the ratio of C to A is 3:1.</p> <p>representations to made up of 6 squares, the areas of the shapes C and A are in the ratio 6:2; and since C is three times A, the ratio 3:1 is the simplest form of 6:2. The simplest form of a ratio is obtained by dividing through by the highest common factor. The ratio of C to B is 6:8 and its simplest form is 3:4. E.g. Simplify (i) 10m : 1000km (ii) Write 4 : 12 in the form 1 : n (iii) Express 15 : 20 in the form n : 1.</p> </div> </div> <p>E.g. 2. Use concrete objects and/or pictorial explain <i>simplest form of a ratio</i>. Shape C is squares and shape A is made up of 2</p> <p>E.g. 3. Solve simple problems that involve ratios and finding total ratios. E.g. (i) Out of 24 students in a class, 10 are girls. Find its simplest form the ratio of boys to girls. (ii) A boy's mass is 50kgs, and his sister's is 45kg. Find the ratio of their masses. (iii) If an orange drink is made from concentrate and water in the ratio 3:8, what fraction of the mixture is concentrate?</p>	<p>Learners develop:</p> <p>Problem Solving Skills;          Critical Thinking; Justification of Ideas; Collaborative Learning; Personal Development and Leadership          Attention to Precision</p>

CONTENT STANDARD	INDICATORS AND EXEMPLARS	SUBJECT SPECIFIC PRACTICES AND CORE COMPETENCIES
<p><b>B6.1.4.1 Demonstrate understanding of the concept of ratios and its relationship to fractions and to the multiplication and division of whole numbers CONT'D</b></p>	<p><b>B6.1.4.1.2 Express ratios in equivalent forms, compare and order ratios</b></p> <p>E.g. 1. Use the concept of ratio as a fraction to find equivalent ratios that can be easily compared. The ratio 2:3 can be expressed as <math>\frac{2}{3}</math> ; to determine which ratio is larger/largest change to equivalent ratios with same denominator and compare or order. E.g. Afia, Bedu and Caro each mix orange squash (S) and water (W) in the ratio 3:14, 2:7 and 1:4 respectively. Whose drink tastes strongest of squash? To determine the one Whose drink tastes strongest of squash we need to have the same unit of water, hence Bedu's.</p> <p>E.g. 2. Solve simple problems that involve simplifying, comparing, finding missing and total ratios. E.g. (i) Given that <math>10:q = 2:3</math>, find q. (ii) The ratio of boys to girls in a class room is 7 to 11. If there are a total of 49 boys in the classroom, then how many boys and girls are there altogether?</p> <p>E.g. 3. Solve simple problems that involve ratios and finding total ratios. E.g. (i) Out of 24 students in a class, 10 are girls. Find its simplest form the ratio of boys to girls. (ii) A boy's mass is 50kgs, and his sister's is 45kg. Find the ratio of their masses. (iii) If an orange drink is made from concentrate and water in the ratio 3:8, what fraction of the mixture is concentrate?</p>	<p>Learners develop:</p> <p>Problem Solving Skills; Critical Thinking; Justification of Ideas; Collaborative Learning; Personal Development and Leadership Attention to Precision</p>

CONTENT STANDARD	INDICATORS AND EXEMPLARS	SUBJECT SPECIFIC PRACTICES AND CORE COMPETENCIES
<p><b>B6.1.4.2</b></p> <p><b>Understand the concept of proportion and its relationship to ratios and rates. Use proportional reasoning and rates to solve real-world and mathematical problems.</b></p>	<p><b>B6.1.4.2.1 Use models to explain proportion as a comparison between quantities with equal ratios</b></p> <p>E.g. 1. Use mapping diagram to explain the concept of proportion as equal fractions or equivalent ratios. The mapping diagram shows that the ratio of number of goats to number of legs are equal, hence the number of goats is proportional to the number of legs. The proportion can be written as equal fractions or ratios, i.e. <math>\frac{3}{12} = \frac{4}{16}</math> or <math>3:12 = 4:16</math></p> <p>E.g. 2. Give learners mappings to identify those that are proportional and those that are not</p> <p>E.g. 3. Work out proportion in given contexts and use them in solving problems; e.g. 200 bottles of equal capacity hold 350 litres of water. How much water does each bottle hold?</p>	<p>Learners develop:</p> <p>Problem Solving Skills; Critical Thinking; Justification of Ideas; Collaborative Learning; Personal Development and Leadership;</p> <p>Attention to Precision</p>

## MATHEMATICS SUBJECT PANEL MEMBERS AND REVIEWERS

NAME	INSTITUTION
<b>Writing panels</b>	
Prof. Eric Magnus Wilmot	University of Cape Coast
Dr. Prince H. Armah	University of Education, Winneba
Dr. Forster Ntow	University of Cape Coast
Prof. Douglas D. Agyei	University of Cape Coast
Mr. Emmanuel Acquaye	Consultant, NEWAGE Strategies, Koforidua
Mr. Miracle Gavor	USAID Learning Numeracy Project
Mr. Stephen Nukpofe	Abetifi College of Education
Mr. Charles B. Ampofo	Kibi Presbyterian College of Education
Mr. Edward Dadson Mills	Methodist B Junior High School, Winneba
Ms. Anita Cordei Collison	Mathematics Desk Officer, NaCCA
Mr. Reginald G. Quartey	Mathematics Desk Officer, NaCCA
<b>Expert Reviewers</b>	
Prof. Damian Kofi Mereku	University of Education, Winneba
Prof. Olivier M. Pamen	African Institute of Mathematical Sciences (AIMS)
Prof. S.K. Amponsah	Kwame Nkrumah University of Science and Technology
<b>Curriculum Adviser</b>	
Dr. Sam K. Awuku	OPM (Oxford Policy Management)
<b>Supervisor</b>	
Felicia Boakye-Yiadom (Mrs)	NaCCA, Outgoing Acting Executive Secretary
Dr. Prince H. Armah	NaCCA, Incoming Acting Executive Secretary
